Land Use Planning

Prof Dr Barrie Needham

Land Use Planning:

Dutch Land-use Planning Prof Dr Barrie Needham, 2014-03-28 Dutch planning is widely known and admired for its ambitions and its achievements. This book provides for the first time a comprehensive description and analysis in English of its full range of policies and practices. It gives an up to date account of the principles written and unwritten behind the planning and in addition shows how the practice sometimes ignores those principles in order to achieve better results. It describes the content of the policies, the measures taken to realise them and the successes and failures. The book is not uncritical of Dutch land use planning but the author values its strengths and believes that planning in other countries could learn from them. These strengths arise in the continuing tension between the high ambitions of the Dutch planning and the ingenuity and pragmatism exercised in order to realise those ambitions.

Strategic Environmental Assessment in

Transport and Land Use Planning Thomas B. Fischer, 2023-04-28 Assessing the full scale of environmental impacts is essential for effective planning of transport and land use. This is an analysis of transport and land use planning using strategic environmental assessment (SEA). It establishes the effectiveness of SEA through comparative studies of practice in three countries: Britain, the Netherlands and Germany. The author shows that use of SEA is widespread but far from systematic. He demonstrates the advantages of adopting a systematic application of a comprehensive form of SEA derived from all the major current approaches. Only once this approach is fully understood and systematically applied will all the full benefits be achieved and environmental impacts be minimized.

Land Use Planning System J. T.

Corkindale, 2004-02-20 The system of land use planning in the UK dates back to the 1947 Town and Country Planning Act. This title examines government's proposals against economic evaluation criteria. It discusses various options for change to the land use planning system, primarily designed to introduce voluntary trading and the privatization of development decisions.

Dutch Land Use Planning Barrie Needham, 2007 Nederland is een van de drukst bevolkte gebieden op de aarde. We staan bekend om ons vermogen om ruimte te scheppen en hoe we met deze ruimte omgaan. Maar de ruimte blijft beperkt. Hoe kunnen we deze ruimte het beste benutten? Het Engelstalige boek Dutch Land Use Planning omschrijft de Nederlandse ruimtelijke planning en ordening en gaat hier dieper op in. Het geeft een volledig beeld van Ruimtelijke Ordening in Nederland. Het boek behandelt naast formele structuren en regels ook informele en dagelijkse praktijk en bevat verfrissende inzichten in Ruimtelijke Ordening in Nederland. Er is veel aandacht voor de wrijvingen tussen de planologische instanties, het handelen met grond en geld, de achterliggende principes en de spanningen tussen principes en pragmatisme.

Land Use and Spatial Planning Graciela Metternicht, 2018-01-12

This book reconciles competing and sometimes contradictory forms of land use while also promoting sustainable land use options. It highlights land use planning, spatial planning, territorial or regional planning and ecosystem based or environmental land use planning as tools that strengthen land governance. Further it demonstrates how to use these types of land use planning to improve economic opportunities based on sustainable management of land resources and to develop land use options that strike a balance between conservation and development objectives. Competition for land is increasing as demand for multiple land uses and ecosystem services rises. Food security issues, renewable energy and emerging carbon markets are creating pressures for the conversion of agricultural land to other uses such as reforestation and biofuels. At the same time there is a growing demand for land in connection with urbanization and recreation, mining, food production and biodiversity conservation. Managing the increasing competition between these services and balancing different stakeholders' interests requires efficient allocation of land resources.

Mansberger, Jenny Paulsson, Józef Hernik, Thomas Kalbro, 2017-01-10. Across Europe land is constantly the subject of enormous and widely varied pressures. The land we have is shrinking in area due to numerous reasons including those that are directly related to climate change and migration. In fact all disciplines that have responsibilities for the husbandry, use, management and administration of the land are forced to address the problems of how to plan and how to utilise this increasingly valuable resource. The papers contained within this book emerge from two symposia held in 2014 and 2015 which now have been arranged along four general themes reflecting the multi disciplinary nature of the disciplines.
