Unified Design of Steel Structures Louis F. Geschwindner, 2011-12-20

Geschwindner's 2nd edition of Unified Design of Steel Structures provides an understanding that structural analysis and design are two integrated processes as well as the necessary skills and knowledge in investigating designing and detailing steel structures utilizing the latest design methods according to the AISC Code. The goal is to prepare readers to work in design offices as designers and in the field as inspectors. This new edition is compatible with the 2011 AISC code as well as marginal references to the AISC manual for design examples and illustrations which was seen as a real advantage by the survey respondents. Furthermore, new sections have been added on Direct Analysis Torsional and flexural torsional buckling of columns, Filled HSS columns and Composite column interaction. More real world examples are included in addition to new use of three dimensional illustrations in the book and in the image gallery, an increased number of homework problems and media approach Solutions Manual Image Gallery.

Initial chapters cover the essentials of structural engineering and structural steel design whilst the remainder of the book is dedicated to a detailed examination of the analysis and design of selected types of structures presenting complex designs in an understandable and user friendly way. These structures include a range of single and multi storey buildings, floor systems and wide span buildings. Emphasis is placed on practical design with a view to helping undergraduate students and newly qualified engineers bridge the gap between academic study and work in the design office. Experienced engineers who need a refresher course on up to date methods of design and analysis will also find the book useful.

Steel Structures Hassan Al Nageim, 2016-11-03

The fourth edition of this popular steel structures book contains references to both Eurocodes and British Standards. All the material has been updated where necessary and new and revised worked examples are included. Sections on the meaning, the purpose and limits of structural design, sustainable steel building and energy saving have been updated. The initial chapters cover the essentials of structural engineering and structural steel design. The remainder of the book is dedicated to a detailed examination of the analysis and design of selected types of structures presenting complex designs in an understandable and user friendly way. These structures include a range of single and multi storey buildings, floor systems and wide span buildings. Each design example is illustrated with applications based on current Eurocodes or British Standard design data thus assisting the reader to share in the environment of the design process that normally takes place in practical offices and develop real design skills. Two new chapters on the design of cased steel columns and plate girders with and without rigid end posts to EC4, EC3 are included too. References have been fully updated and include useful website addresses. Emphasis is placed on practical design with a view to helping undergraduate students and newly qualified engineers bridge the gap between academic study and work in the design office. Practising engineers who need a refresher course on up to date methods of design and analysis to EC3 and EC4 will also find the book useful and numerous worked examples are included.

Steel Structures Jean-Marc Franssen, Paulo Vila Real, 2016-10-10 This book explains and illustrates the rules that are given in the Eurocodes for designing steel structures subjected to fire After the first introductory chapter Chapter 2 explains how to calculate the mechanical actions loads in the fire situation based on the information given in EN 1990 and EN 1991 Chapter 3 is dedicated to the models which represent the thermal actions created by the fire Chapter 4 describes the procedures to be used to calculate the temperature of the steelwork from the temperature of the compartment and Chapter 5 shows how the information given in EN 1993 1 2 is used to determine the load bearing capacity of the steel structure Chapter 6 presents the essential features that characterize the advanced calculation models for thermal and mechanical response The methods used to evaluate the fire resistance of bolted and welded connections are described in Chapter 7 Chapter 8 describes a computer program called Elefir EN which is based on the simple calculation model given in the Eurocode and allows designers to quickly and accurately calculate the performance of steel components in the fire situation Chapter 9 looks at the issues that a designer may be faced with when assessing the fire resistance of a complete building This is done via a case study and addresses most of the concepts presented in the previous chapters For this second edition the content has been revised and extended The book contains some new sections e g a comparison between the simple and the advanced calculation as well as additional examples

The Behaviour and Design of Steel Structures to EC3, Fourth Edition N.S. Trahair, M.A. Bradford, David Nethercot, Leroy Gardner, 2007-11-21 The fully revised fourth edition of this successful textbook fills a void which will arise when British designers start using the European steel code EC3 instead of the current steel code BS5950 The principal feature of the forth edition is the discussion of the behaviour of steel structures and the criteria used in design according to the British version of EC3 Thus it serves to bridge the gap which too often occurs when attention is concentrated on methods of analysis and the sizing of structural components Because emphasis is placed on the development of an understanding of behaviour many analytical details are either omitted in favour of more descriptive explanations or are relegated to appendices The many worked examples both illustrate the behaviour of steel structures and exemplify details of the design process The Behaviour and Design of Steel Structures to EC3 is a key text for senior undergraduate and graduate students and an essential reference tool for practising structural engineers in the UK and other countries
