The Blue Planet An Introduction To Earth System Science:

The Blue Planet Brian J. Skinner, Barbara W. Murck, 2011-01-04 The Third Edition of Blue Planet An Introduction to Earth System Science treats earth science from a systems perspective showing how the four spheres lithosphere hydrosphere atmosphere biosphere are interrelated. In this edition significant emphasis is placed on cycling of materials and energy and interactions among the spheres. The text also places much clearer emphasis on basic science which can be seen in the reorganization of topics into Energy and Matter chapters as well as a new The Basics feature in each chapter. This edition is also more systematic about documenting human impacts on the various spheres of the Earth system.

The Blue Planet

Brian J. Skinner, Stephen C. Porter, 1995 A unique introduction to the holistic view of the Earth. Stresses the systems approach showing the energy flows and links between the Earth's different parts the atmosphere hydrosphere biosphere and the solid Earth and the balance in the global environment that exists as a result of these interactions. Every chapter opens with a topical essay dealing with research on the subject matter and closes with a guest essay written by a researcher in the field. Special attention has been paid to select full color artwork and photographs which illuminate discussions.

The Blue Planet

Brian J. Skinner, 2011 New To This Edition The overall structure of the text more clearly reflects the spheres of the Earth system. Significant emphasis is placed on cycling of materials and energy and interactions among the spheres. The Basics feature focuses on basic science that is carried over from chapter to chapter. More systematic documentation of human impacts on the various spheres of the Earth system. Addition of new material on ecosystems biomes and soils.

in research One of the greatest challenges is understanding ongoing environmental changes The longer the time scale the more components of the Earth system are involved e g interannual and decadal variations are related to the coupled atmosphere ocean sea ice system whereas longer variations like glacial interglacial or Cenozoic transitions involve the carbon cycle ice sheets and gateways In order to get deep insights into Earth system science observations remote sensing past environmental data as well as modeling need to be integrated These different approaches are traditionally taught in separated disciplines at bachelor and master levels It is therefore necessary to bring these disciplines together in PhD programs
