The Radiance of France, new edition Gabrielle Hecht, 2009-07-31

How it happened that technological prowess and national glory or radiance which also means radiation in French became synonymous in France as nowhere else In the aftermath of World War II as France sought a distinctive role for itself in the modern postcolonial world the nation and its leaders enthusiastically embraced large technological projects in general and nuclear power in particular The Radiance of France asks how it happened that technological prowess and national glory or radiance which also means radiation in French became synonymous in France as nowhere else To answer this question Gabrielle Hecht has forged an innovative combination of technology studies and cultural and political history in a book that as Michel Callon writes in the new foreword to this edition not only sheds new light on the role of technology in the construction of national identities but is also a seminal contribution to the history of contemporary France Proposing the concept of technopolitical regime as a way to analyze the social political cultural and technological dynamics among engineering elites unionized workers and rural communities Hecht shows how the history of France's first generation of nuclear reactors is also a history of the multiple meanings of nationalism from the postwar period and France's desire for post Vichy redemption to 1969 and the adoption of a Frenchified American design This paperback edition of Hecht's groundbreaking book includes both Callon's foreword and an afterword by the author in which she brings the story up to date and reflects on such recent developments as the 2007 French presidential election the promotion of nuclear power as the solution to climate change and France's aggressive exporting of nuclear technology

Claude Fleury (1640-1723) as an Educational Historiographer and Thinker R.

Wanner, 1975-08-31 This study has grown out of an interest in French education and culture that dates from fondly remembered student days in France. Specifically it is an attempt to explain the educational thought of Claude Fleury, a literate responsible homme de lettres who analyzed the historical origins of public education as it existed in seventeenth century France and on that basis proposed what he considered to be a more generally useful program of studies. Generous space has been devoted to historical social and pedagogical background in an effort to place Fleury's thought in its proper cultural context, namely that of the decline of the Classical Age and the dawn of the Age of Reason. This background material represents also an attempt to explain at times in detail the origin of Fleury's *Traite du Choix et de la Methode des Etudes* and his rise to scholarly and pedagogical prominence at court. It is possible that Fleury's thought, while of most immediate interest to students of seventeenth century cultural history, will be of interest also to a more general audience. In particular those charged with providing education that must respond to the ever increasing practical needs of society and at the same time give to contemporary man a sense of his cultural heritage may find in Fleury's thought some useful historical perspective. It is a pleasure to acknowledge that this study would not have been possible without the encouragement and guidance of Dr. William W.
