**Contemporary Issues for Events** Claire Drakeley, Tim Brown, 2025-05-01 An edited volume which discusses and investigates five key themes of fast moving and highly significant factors in the field of events management Technology Equality Diversity Inclusion Sustainability Competition Finances Growth Creativity Event Operations A Blueprint for Promoting Academic and Social Competence in After-School Programs Thomas P. Gullotta, Martin Bloom, Christianne F. Gullotta, Jennifer C. Messina, 2010-06-25 School activities alone are not always sufficient to ensure children's academic progress or socio emotional development and well being And the time when many children typically have the least adult supervision immediately after school is also the time that they are at the highest risk to act as perpetrators or become victims of antisocial behavior Throughout A Blueprint for Promoting Academic and Social Competence in After School Programs which focuses on children in grades 1 through 6 noted experts identify the best practices of effective programs and pinpoint methods for enhancing school based skills and making them portable to home and neighborhood settings This volume 1 Analyzes the concepts central to effective after school programs 2 Offers developmental cognitive and social ecology perspectives on how children learn 3 Features more than 100 exercises that develop young people's capabilities for academic social moral and emotional learning These exercises are ready to use or can be adapted to students unique needs 4 Emphasizes young people's development as students and as productive members of society during middle to late childhood and early adolescence 5 Presents explicit theory and evidence that can be used to explain the value of after school programs for budget proposals This important book will find an appreciative ready audience among the program directors who design after school curricula the educators who implement them the mental health and social work professionals who help staff them and the current crop of graduate students who will create the next generation of programs *Attention and consciousness in different senses* Naotsugu Tsuchiya, Jeroen J. Van Boxtel, 2013-06-03 Although often used in everyday speech and in the scholarly literature selective attention and consciousness lack clear undisputed definitions Partly because of this deficit there exists a lively debate on the relationship between the two Nevertheless attention has been studied scientifically for a long time because a variety of tasks allow researchers to control several of its aspects e g focused and feature based attention Consciousness as a scientific subject of study has emerged more recently but is now rapidly gaining traction Scientific studies of consciousness concern the state or level of consciousness e g awake as opposed to in coma dreamless sleep or under anaesthesia as well as the contents of consciousness or the phenomenology of perception With the increase in consciousness focused research there is a concomitant surge in research examining the relationship between attention and consciousness This relationship between attention and consciousness is the topic of this Research Topic Contributions related to or focused solely on attention or on consciousness will not be considered It had long been assumed that attention and consciousness are inextricably intertwined two sides of the same coin However recently substantial evidence has

emerged that attention and consciousness are interacting but separable processes It is however debated how tight the interactions are and what the exact nature of the relationship is Therefore we invite researchers from different camps to provide opinionated but balanced literature reviews Different groups will interpret the same data in different ways We feel that combining these views in one Research Topic is immensely valuable to researchers from different fields Apart from reviews we also invite potential contributors to provide new and exciting evidence in the form of original contributions that may support any of the different views Even though attention and consciousness are critical aspects of many different cognitive processes they are mainly studied though not exclusively in the domain of visual perception In other sensory modalities e g olfaction or audition it is currently not clear whether distinctions between attention and consciousness exist which is even more true for other cognitive processes such as memory Therefore we specifically invite contributions covering the auditory somatosensory olfactory and memory domain We ask all contributors to provide discussions on the relationship between attention and consciousness and focus on 1 the influence of attention on sensory processing 2 the formation of conscious perception 3 the evidence for unconscious processing and its modulation by attention 4 potential indications for dissociations between attention and consciousness e g does paying attention to a stimulus decrease performance on e g a discrimination task 5 neuroimaging and neurophysiology data pertaining to these questions Often one is caught in one's own research field and lacks the time or the knowledge to delve into another field This Research Topic should provide a great overview in great breadth of the current state of knowledge on the links between attention and consciousness and their interactions in several different sensory modalities

**Electronic Dance Music** Christopher T. Conner, David R. Dickens, 2023-02-13 Electronic Dance Music From Deviant Subculture to Culture Industry explores the subculture's emergence as a deviant subculture This text analyzes how industry professionals fans and public officials helped usher in a new age of EDM arguing that while the defining features of the subculture made it attractive they also laid the foundations for outsiders to commodify the movement as a culture industry Conner and Dickens explore the concept of commodified resistance as the mechanism by which the movement's politically dissident features were removed and its place as a multi-billion dollar industry made possible Ultimately this text advocates the continued utility of the culture industry thesis through an empirical analysis of the EDM subculture Check out an interview with the author on the New Books Network podcast here <https://newbooksnetwork.com/electronic-dance-music/>

*Communicating Meaning* Boris M. Velichkovsky, Duane M. Rumbaugh, 2013-02-01 Dealing specifically with the origins and development of human language this book is based on a selection of materials from a recent international conference held at the Center of Interdisciplinary Research at the University of Bielefeld in Germany The significance of the volume is that it testifies to paradigmatic changes currently in progress The changes are from the typical emphasis on the syntactic properties of language and cognition to an analysis of biological and cultural factors which make these formal properties possible The chapters provide in depth coverage of such topics as new theoretical foundations for cognitive research phylogenetic prerequisites and ontogenesis of language and environmental and cultural forces of development Some of the arguments and lines of research are relatively well known others deal with completely new interdisciplinary approaches As a result some of the authors conclusions are in part rather counterintuitive such as the hypothesis that language as a system of formal symbolic transformations may be in fact a very late phenomenon located in the sphere of socio cultural and not biological development While highly debatable this and other hypotheses of the book may well define research questions for the future
