The Statistical Analysis of Recurrent Events Richard J. Cook,Jerald Lawless,2007-07-16 This book presents models and statistical methods for the analysis of recurrent event data The authors provide broad detailed coverage of the major approaches to analysis while emphasizing the modeling assumptions that they are based on More general intensity based models are also considered as well as simpler models that focus on rate or mean functions Parametric nonparametric and semiparametric methodologies are all covered with procedures for estimation testing and model checking

Generalized Linear and Nonlinear Models for Correlated Data Edward F. Vonesh,2014-07-07 Edward Vonesh s Generalized Linear and Nonlinear Models for Correlated Data Theory and Applications Using SAS is devoted to the analysis of correlated response data using

SAS with special emphasis on applications that require the use of generalized linear models or generalized nonlinear models. Written in a clear easy to understand manner it provides applied statisticians with the necessary theory tools and understanding to conduct complex analyses of continuous and or discrete correlated data in a longitudinal or clustered data setting. Using numerous and complex examples the book emphasizes real world applications where the underlying model requires a nonlinear rather than linear formulation and compares and contrasts the various estimation techniques for both marginal and mixed effects models. The SAS procedures MIXED GENMOD GLIMMIX and NLMIXED as well as user specified macros will be used extensively in these applications. In addition the book provides detailed software code with most examples so that readers can begin applying the various techniques immediately. This book is part of the SAS Press program.
