Bus Driver Test Scenarios:

Generating test scenarios for assessing automated driving systems using scenario fusion (Band 28) Maximilian Bäumler, 2024 This thesis presents the find unify synthesize evaluate for representativity FUSE4Rep process model a novel approach to the safety evaluation of automated driving systems ADS Designed to make road traffic safer by preventing accidents ADS must demonstrate a higher level of safety than human drivers FUSE4Rep addresses the challenge of unifying divergent information from sources such as police accident data and video based traffic observations to ensure a comprehensive scenario representation Through scenario fusion the process synthesises diverse traffic data into a representative scenario catalogue enabling a thorough assessment of ADS over a wide scenario space Using statistical matching it derives and varies logical scenarios to cover potential real world conditions in stochastic simulations A case study shows how German police accident data and video based observations are used to create a fused scenario catalogue demonstrating the practical application of FUSE4Rep As part of the comprehensive Dresden Method for ADS evaluation this approach provides a reliable framework for the development of safer ADS and contributes to improved road safety

Transaction-Level Modeling with SystemC Frank Ghenassia, 2006-01-16 Currently employed at STMicroelectronics Transactional Level Modeling TLM puts forward a novel SoC design methodology beyond RTL with measured improvements of productivity and first time silicon success The SystemC consortium has published the official TLM development kit in May 2005 to standardize this modeling technique The library is flexible enough to model components and systems at many different levels of abstractions from cycle accurate to untimed models and from bit true behavior to floating point algorithms However careful selection of the abstraction level and associated methodology is crucial to ensure practical gains for design teams Transaction Level Modeling with SystemC presents the formalized abstraction and related methodology defined at STMicroelectronics and covers all major topics related to the Electronic System Level ESL industry TLM modeling concepts Early embedded software development based on SoC virtual prototypes Functional verification using reference models Architecture analysis with mixed TLM and cycle accurate platforms Unifying TLM and RTL with platform automation tools Complementary to the book open source code to put this approach into practice is available on several Internet sites as indicated in the first chapter
