Prospects and Problems of a Biological Approach to the Study of Formal Social Organizations: A Review of *Biology and Bureaucracy*

Warren D. TenHouten

Department of Sociology  
University of California  
Los Angeles, California 90024

The social environment of individuals in post-modern societies has become an "administered world," akin to Max Weber's vision of bureaucracy as an "iron cage" tightly knit around humanity. Flöhr contends that our unease as clients in this environment can be understood by means of ethological concepts: the client is subdominant, is on foreign territory, and has a natural disposition toward reciprocal altruism violated because no exchange takes place. This situation has come about through the emergence of large-scale social groups in which face-to-face social membership is replaced by extensive contact with strangers; personal contact gives way to technical media; social change reduces the value of intergenerational cultural knowledge; the environment becomes artificial; and family support is reduced in availability and importance. All of these conditions characterize bureaucracy, Flöhr emphasizes, and have by analogy been shown pathogenic for laboratory animals in the experimental setting. If bureaucracy is thus not supportive of individual self-actualization but rather contributes to a fragmentation of the soul, and if sociobiologists are correct in their contention that our energies are fundamentally directed to maximizing individual relative genetic potentiality rather than that of the species, then how can our administered world be accounted for? The stability of political and societal systems, via their perceived legitimization, is at issue here. This issue concerns not only scientific understanding but ethics as well. A biological perspective, whatever the limitations of its present theoretical development, must be credited with its insistence on morality and ethics as intrinsic to a scientific understanding of bureaucracy and the state.

Certainly the development and functional organization of the human brain must be considered in any comprehensive neurosocial perspective on formal social organization. The evolution of human cognitive abilities has made complex social-organizational forms both possible and necessary (Kummer). But the emergence of bureaucratic organization on an extended scale cannot be explained by reference to cognitive abilities alone. Rather it is necessary to invoke Hamilton's (1964a, 1964b) biological rule of
