

The background of the entire image is a photograph of a person wearing a red shirt, working on a large, flat, light-colored surface, likely a lithographic stone. The person's hands are visible, using a tool to work on the surface. The image is slightly blurred, giving it a historical or artistic feel.

At last, Herr Alois Senefelder has used the hours that he could spare from his continuous experiments and investigations to write down the history of his labors, out of his faithful memory, and also to give a full description of all methods invented by him to this time, accompanied by highly instructive specimen pages, partly made by himself and partly by artistic friends, but all printed either with his own hand or under his direct supervision. Had the stone

merely proved available as substitute for copper I would have returned to copper as soon as I could afford it despite several advantages of stone and for the following reasons first the necessary weight and thickness of the stones second because the printing process was slower than with copper third because probably I never would have become sufficiently skilled in the difficult manipulation of washing off but chiefly because the necessary spur the originality of the discovery would have been lacking since I remembered that as a child of five or six I had seen a music printery in Frankfurt or Mainz where the notes were etched in black slate stone *The Invention of Lithography* Alois Senefelder,1911 **INVENTION OF**
