Cybernetic Trading Strategies Murray A. Ruggiero, 1997-07-01 The computer can do more than show us pretty pictures. It can optimize backtest prove or disprove old theories, eliminate the bad ones and make the good ones better. *Cybernetic Trading Strategies* explores new ways to use the computer and finds ways to make a valuable machine even more valuable from the Foreword by John J. Murphy. Until recently the computer has been used almost exclusively as a charting and data gathering tool. But as traders and analysts have quickly discovered its capabilities are far more vast. Now in this groundbreaking new book Murray Ruggiero, a leading authority on cybernetic trading systems, unlocks their incredible potential and provides an in depth look at the growing impact of advanced technologies on intermarket analysis. A unique resource, *Cybernetic Trading Strategies* provides specific instructions and applications on how to develop tradable market timing systems using neural networks, fuzzy logic, genetic algorithms, chaos theory and machine induction methods. Currently utilized by some of the most powerful financial institutions in the world including John Deere and Fidelity Investments, today's advanced technologies go beyond subjective interpretations of market indicators to enhance traditional analysis. As a result existing trading systems gain a competitive edge. Ruggiero reveals how incorporating elements of statistical analysis, spectral analysis, neural networks, genetic algorithms, fuzzy logic and other high tech concepts into a traditional technical trading system can greatly improve the performance of standard trading systems. For example, spectral analysis can be used to detect when a market is trending earlier than classical indicators such as ADX. Drawing on his extensive research on market analysis, Ruggiero provides an incisive overview of cyber systems systems that when applied correctly can increase trading returns by as much as 200% to 300%. The author covers a wide range of important topics examining classical technical analysis methodologies and seasonal trading as well as statistically based market prediction and the mechanization of subjective methods such as candlestick charts and the Elliott Wave. Precise explanations and dozens of real world examples show you how to incorporate advanced technologies into classical technical analysis methodologies. Identify which of these technologies have the most market applicability. Build trading systems to maximize reliability and profitability based on your own risk reward criteria. Most importantly, *Cybernetic Trading Strategies* takes you step by step through system testing and evaluation a crucial step for controlling risk and managing money. With up to date information from one of the field's leading authorities

Covel's newest edition has been revised and extended with 7 brand new interviews and research proof from his one-of-a-kind network. This is trend following for today's generation. Meet great trend followers, learning their rules and philosophy of the game. Examine data to see how trend following excels when the market knows what hits the fan. Understand trend trading from behavioral economics to rules-based decision making, to its lambasting of the efficient markets theory. Compare trend trading systems to do-it-yourself or invest with a trend fund. Trend following is not prediction, passive index investing, buy and hope or any form of fundamental analysis. It utilizes concrete rules or heuristics to profit from a behavioral perspective. Trend Following is clear cut, straightforward and evidence-based and will secure your financial future in bull, bear and black swan markets. If you're finally ready to profit in the markets, Trend Following is the definitive treatise for a complex world in constant chaos.
