mechanical engineering design where he was constantly confronted by problems that can most easily and directly be solved via the judicious use of mathematical optimization techniques This book is however not a collection of case studies restricted to the above mentioned specialized research areas but is intended to convey the basic optimization principles and algorithms to a general audience in such a way that hopefully the application to their own practical areas of interest will be relatively simple and straightforward Critical Reviews in Biotechnology ,1984 Western Aviation, Missiles, and Space ,1957
