Zander,Jan B. F. van Erp,2015-07-27 What can we learn from spontaneously occurring brain and other physiological signals about an individual s cognitive and affective state and how can we make use of this information One line of research that is actively involved with this question is Passive Brain Computer Interfaces BCI To date most BCIs are aimed at assisting patients for whom brain signals could form an alternative output channel as opposed to more common human output channels like speech and moving the hands However brain signals

possibly in combination with other physiological signals also form an output channel above and beyond the more usual ones they can potentially provide continuous online information about an individual s cognitive and affective state without the need of conscious or effortful communication The provided information could be used in a number of ways Examples include monitoring cognitive workload through EEG and skin conductance for adaptive automation or using ERPs in response to errors to correct for a behavioral response While Passive BCIs make use of online neuro physiological responses and close the interaction cycle between a user and a computer system neuro physiological responses can also be used in an offline fashion Examples of this include detecting amygdala responses for neuromarketing and measuring EEG and pupil dilation as indicators of mental effort for optimizing information systems The described field of applied neuro physiology can strongly benefit from high quality scientific studies that control for confounding factors and use proper comparison conditions Another area of relevance is ethics ranging from dubious product claims acceptance of the technology by the general public privacy of users to possible effects that these kinds of applications may have on society as a whole In this Research Topic we aimed to publish studies of the highest scientific quality that are directed towards applications that utilize spontaneously effortlessly generated neurophysiological signals brain and or other physiological signals reflecting cognitive or affective state We especially welcomed studies that describe specific real world applications demonstrating a significant benefit compared to standard applications We also invited original new kinds of proposed applications in this area as well as comprehensive review articles that point out what is and what is not possible according to scientific standards in this field Finally we welcomed manuscripts on the ethical issues that are involved Connected to the Research Topic was a workshop held on June 6 during the Fifth International Brain Computer Interface Meeting June 3 7 2013 Asilomar California that brought together a diverse group of people who were working in this field We discussed the state of the art and formulated major challenges as reflected in the first paper of the Research Topic **EFL Learners' Task Perceptions and Agency in Blended Learning** Joannis Kaliampos,2022-09-05 How does foreign language learners agency emerge at the micro level of classroom activity during the enactment of digitally enhanced tasks and how do these learners exercise their agency digitally within and beyond the classroom Drawing on research in task based and computer assisted language learning this mixed methods study uncovers key dimensions of learner agency a newcomer to the field of language teaching methodology and applied linguistics The analysis centers on three case studies of teenage students perceptions and handling of digitally enhanced language learning tasks These are complemented with a Germany wide questionnaire survey among participants in the U S Embassy School Election Project an intercultural blended language learning project that has drawn over 15 000 participants since 2012 **Resources in Education** ,1998 Actionable Learning Terrence Morrison,2001 **Dialogue Education at Work** Jane Vella,2004 This volume of case studies is the companion volume to Jane Vella s Learning to Listen Learning to Teach It demonstrates how educators have used Jane Vella s methods in their own work **A Theory of**
