Advances in Chemical Engineering Guy B. Marin, 2006-11-10 The theme of the present volume of Advances in Chemical Engineering is Computational Fluid Dynamics CFD and aims to show the state of the art of the application of CFD in chemical engineering. The volume is made up of five complementary contributions providing a style of between a tutorial and a research paper. Some contributions are entirely limited to velocity and temperature fields. Others emphasize the difficulties associated with the combination of transport and reaction. Contributions include dealing with the simulation of gas liquid bubble columns and gas liquid solid fluidized beds. Addressing the different levels of modeling that are required in order to cover the full spectrum of length scales that are important for industrial applications. Stirred turbulent vessels and the chemical reactions. The importance of chemical reaction kinetics and the interaction with transport phenomena. Finally looking at reactor engineering the catalytic fixed bed reactor. Original reviews. Leading chemical engineers as authors. Reviewing the state of the art of Computational Fluid Dynamics CFD.
