## **The Knowledge:**

**The Knowledge-creating Company** Ikujirō Nonaka, Hirotaka Takeuchi, 1995 The authors contend that Japanese firms are successful because they are innovative and not merely masters of imitation as some think and because they create new knowledge and use it to produce successful products and technologies Illustrations [The Urban University and the Knowledge Economy](#) Patrizia Ingallina, 2025-10-03 This book presents international experiences of territorial strategies and urban projects in which universities have played a major role over the past fifteen years through spatial planning and within a multiscalar approach This approach constitutes the book's first originality illustrating the complexity of certain cases such as New York London or the Greater Paris Metropolis by highlighting the significant interconnections between spatial and institutional scales The second innovative aspect lies in the selection of case studies some of which are addressed for the first time in international literature Benguerir in Morocco Bergamo in Italy Grenoble Lille Marseille and Lyon in France and Hanoi in Vietnam while others are still little known from the perspective of university planning and its political and economic role in major metropolitan areas Greater Paris Metropolis Seoul The third key point explores the opportunity to directly compare well established Western metropolises like New York and London with the evolving Greater Paris Metropolis It also highlights Montreal a city blending Anglo Saxon and French influences while seeking its own unique path Additionally Asia's dynamic role is explored from China's innovative university planning to Hanoi's ambitious projects and Seoul's tension between national policies and metropolitan ambitions All chapters have been designed to raise questions provoke reflections and develop a perspective on the ongoing evolution of territorial strategies that leverage universities and the research conducted within them as a means to drive economic growth and increase productivity These strategies also converge toward an image of the city as a knowledge hub facilitating relationships between universities businesses and city users [\*\*The\*\*](#)

**The Theory of the Knowledge Square: The Fuzzy Rational Foundations of the Knowledge-Production Systems** Kofi Kissi Dompere, 2012-08-28 The monograph is about a meta theory of knowledge production process and the logical pathway that connects the epistemic possibility to the epistemic reality It examines the general conditions of paradigms for information processing and isolates the classical and fuzzy paradigms for comparative analysis The sets of conditions that give rise to them are defined stated and analyzed to abstract the corresponding sets of laws of thought The fuzzy paradigm with its corresponding logic and mathematics is related to inexact symbolism for the defective information structure where the results of the knowledge production must satisfy the epistemic conditionality composed of fuzzy conditionality and fuzzy stochastic conditionality under the principle of logical duality with continuum The classical paradigm with its corresponding logic and mathematics is related to exact symbolism for exact information structure where the vagueness component of the defectiveness is assumed away and where the results of the knowledge production must satisfy no epistemic conditionality or at the maximum only the stochastic conditionality under the principle of logical dualism with excluded middle It is argued

that the epistemic path that links ontological space to the epistemological space is information The ontological space is taken as the primary category of reality while the epistemological space is shown to be a derivative Such information is universally defective and together with assumptions imposed guides the development of paradigms with their laws of thought logic of reasoning mathematics and computational techniques The relational structure is seen in terms of logical trinity with a given example as matter information energy transformational trinity which is supported by the time trinity of past present future relationality The book is written for professionals researchers and students working in philosophy of science decision choice theories economies sciences computer science engineering cognitive psychology and researchers working on or interested in fuzzy paradigm fuzzy logic fuzzy decisions and phenomena of vagueness and ambiguities fuzzy mathematics fuzzy stochastic processes and theory of knowledge It is further aimed at research institutions and libraries The subject matter belongs to extensive research and development taking place on fuzzy phenomena and the debate between the fuzzy paradigm and the classical paradigm relative to informatics synergetic science and complexity theory The book will have a global appeal and across disciplines Its strength besides the contents is the special effort that is undertaken to make it relevant and accessible to different areas of sciences and knowledge production
