* You can use facts you know to solve difficult multiplication problems.

$3 \times 14 = ?$ I don't know! :/ Break 14 into $9 + 5$

So now you can do $(3 \times 9) + (3 \times 5) =$ I know these! :)

$$3 \times 9 = 27$$

$$\begin{array}{r} 3 \times 5 = 15 \\ \hline 42 \end{array}$$

add these together

So $3 \times 14 = 42$

Lessons for Extending Multiplication Maryann Wickett, Marilyn Burns, 2001 Lessons games and activities to increase children s multiplication skills *CK-12 Algebra I Teacher's Edition* CK-12 Foundation, 2012-05-08 CK 12 Foundation s Algebra I Teacher s Edition FlexBook complements CK 12 s Algebra I book that covers Equations Functions Real Numbers Equations of Lines Solving Systems of Equations Quadratic Equations **Using Design Research and History to Tackle a Fundamental Problem with School Algebra** Sinan Kanbir, M. A. (Ken) Clements, Nerida F. Ellerton, 2017-10-28 In this well illustrated book the authors Sinan Kanbir Ken Clements and Nerida Ellerton tackle a persistent and universal problem in school mathematics why do so many middle school and secondary school students find it difficult to learn algebra well What makes the book important are the unique features which comprise the design research approach that the authors adopted in seeking a solution to the problem The first unique feature is that the authors offer an overview of the history of school algebra Despite the fact that algebra has been an important component of secondary school mathematics for more than three centuries there has never been a comprehensive historical analysis of factors influencing the teaching and learning of that component The authors identify through historical analysis six purposes of school algebra a algebra as a body of knowledge essential to higher mathematical and scientific studies b algebra as generalized arithmetic c algebra as a prerequisite for entry to higher studies d algebra as offering a language and set of procedures for modeling real life problems e algebra as an aid to describing structural properties in elementary mathematics and f algebra as a study of variables They also raise the question whether school algebra represents a unidimensional trait Kanbir Clements and Ellerton offer an unusual hybrid theoretical framework for their intervention study by which seventh grade students significantly improved their elementary algebra knowledge and skills Their theoretical frame combined Charles Sanders Peirce s triadic signifier interpretant signified theory which is in the realm of semiotics with Johann Friedrich Herbart s theory of apperception and Ken Clements and Gina Del Campo s theory relating to the need to expand modes of communications in mathematics classrooms so that students engage in receptive and expressive modes Practicing classroom teachers formed part of the research team This book appears in Springer s series on the History of Mathematics Education Not only does it include an important analysis of the history of school algebra but it also adopts a theoretical frame which relies more on theories from the past than on contemporary theories in the field of mathematics education The results of the well designed classroom intervention are sufficiently impressive that the study might have created and illuminated a pathway for future researchers to take
