Cover,Joy A. Thomas,2006-07-18 The latest edition of this classic is updated with new problem sets and material The Second Edition of this fundamental textbook maintains the book s tradition of clear thought provoking instruction Readers are provided once again with an instructive mix of mathematics physics statistics and information theory All the essential topics in information theory are covered in detail including entropy data compression channel capacity rate distortion network information theory and hypothesis testing The authors provide readers with a solid understanding of the underlying theory and applications Problem sets and a telegraphic summary at the end of each chapter further assist readers The historical notes that follow each chapter recap the main points The Second Edition features Chapters reorganized to improve teaching 200 new problems New material on source coding portfolio theory and feedback capacity Updated references Now current and enhanced the Second Edition of Elements of Information Theory remains the ideal textbook for upper level undergraduate and graduate courses in electrical engineering statistics and telecommunications *Information, Randomness & Incompleteness: Papers On Algorithmic Information Theory* Gregory J Chaitin,1987-12-18 The papers gathered in this book were published over a period of more than twenty years in widely scattered journals They led to the

discovery of randomness in arithmetic which was presented in the recently published monograph on Algorithmic Information Theory by the author There the strongest possible version of G del s incompleteness theorem using an information theoretic approach based on the size of computer programs was discussed The present book is intended as a companion volume to the monograph and it will serve as a stimulus for work on complexity randomness and unpredictability in physics and biology as well as in metamathematics **Information Theory** Klaus Krippendorff,1986-09 Information theory always has the dual appeal of bringing important concepts to the study of communication in society and of providing a calculus for information flows within systems This book introduces readers to basic concepts of information theory extending its original linear conception of communication to many variables networks and higher order interactions including loops and developing it into a method for analyzing qualitative data It elaborates on the algebra of entropy and information shows how complex models of data are constructed and tested describes algorithms for exploring multivariate structures using such models and gives illustrative applications of these techniques The book is designed as a text but it can also serve as a handbook for social researchers and systems theorists with an interest in communication **Key Papers in Information Science** Arthur W. Elias,1972 *Formal Theories of Information* Giovanni Sommaruga,2009-04-22 This book presents the scientific outcome of a joint effort of the computer science departments of the universities of Berne Fribourg and Neuch tel Within an initiative devoted to Information and Knowledge these research groups collaborated over several years on issues of logic probability inference and deduction The goal of this volume is to examine whether there is any common ground between the different approaches to the concept of information The structure of this book could be represented by a circular model with an innermost syntactical circle comprising statistical and algorithmic approaches a second larger circle the semantical one in which meaning enters the stage and finally an outermost circle the pragmatic one casting light on real life logical reasoning These articles are complemented by two philosophical contributions exploring the wide conceptual field as well as taking stock of the articles on the various formal theories of information **Information Theory** Robert B. Ash,1990-01-01 Developed by Claude Shannon and Norbert Wiener in the late Forties information theory or statistical communication theory deals with the theoretical underpinnings of a wide range of communication devices radio television radar computers telegraphy and more This book is an excellent introduction to the mathematics underlying the theory Designed for upper level undergraduates and first year graduate students the book treats three major areas analysis of channel models and proof of coding theorems Chapters 3 7 and 8 study of specific coding systems Chapters 2 4 and 5 and study of statistical properties of information sources Chapter 6 Among the topics covered are noiseless coding the discrete memoryless channel error correcting codes information sources channels with memory and continuous channels The author has tried to keep the prerequisites to a minimum However students should have a knowledge of basic probability theory Some measure and Hilbert space theory is helpful as well for the last two sections of Chapter 8 which treat time continuous channels An

appendix summarizes the Hilbert space background and the results from the theory of stochastic processes necessary for these sections The appendix is not self contained but will serve to pinpoint some of the specific equipment needed for the analysis of time continuous channels In addition to historic notes at the end of each chapter indicating the origin of some of the results the author has also included 60 problems with detailed solutions making the book especially valuable for independent study **Entropy and Information Theory** Robert M. Gray,2011-01-27 This book is an updated version of the information theory classic first published in 1990 About one third of the book is devoted to Shannon source and channel coding theorems the remainder addresses sources channels and codes and on information and distortion measures and their properties New in this edition Expanded treatment of stationary or sliding block codes and their relations to traditional block codes Expanded discussion of results from ergodic theory relevant to information theory Expanded treatment of B processes processes formed by stationary coding memoryless sources New material on trading off information and distortion including the Marton inequality New material on the properties of optimal and asymptotically optimal source codes New material on the relationships of source coding and rate constrained simulation or modeling of random processes Significant material not covered in other information theory texts includes stationary sliding block codes a geometric view of information theory provided by process distance measures and general Shannon coding theorems for asymptotic mean stationary sources which may be neither ergodic nor stationary and d bar continuous channels **Information theory: papers read at...** Symposium on Information Theory, 3rd, London, 1955,Colin Cherry, **Information-Spectrum Methods in Information Theory** Te Sun Han,2013-04-18 From the reviews This book nicely complements the existing literature on information and coding theory by concentrating on arbitrary nonstationary and or nonergodic sources and channels with arbitrarily large alphabets Even with such generality the authors have managed to successfully reach a highly unconventional but very fertile exposition rendering new insights into many problems MATHEMATICAL REVIEWS **A First Course in Information Theory** Raymond W. Yeung,2002-04-30 An introduction to information theory for discrete random variables Classical topics and fundamental tools are presented along with three selected advanced topics Yeung Chinese U of Hong Kong presents chapters on information measures zero error data compression weak and strong typicality the I measure Markov structures channel capacity rate distortion theory Blahut Arimoto algorithms information inequalities and Shannon type inequalities The advanced topics included are single source network coding multi source network coding and entropy and groups Annotation copyrighted by Book News Inc Portland OR **Principles and Practice of Information Theory** Richard E. Blahut,1987 **Information Theory** Defense Documentation Center (U.S.),1962 **Information Theory** Colin Cherry,1961
