Antimicrobial Peptides and Complement - Maximising the Inflammatory Response Cordula M. Stover,2015-12-18 Antimicrobial peptides and complement are distinct components of the innate immune defence While antimicrobial peptides

after cleavage of a preproprotein have the ability to insert directly in non host membranes complement requires a sequential enzymatic activation in the fluid phase in order to produce a transmembrane membrane attack complex Its insertion is controlled by membrane bound regulators Deficiencies are described for both effectors and relate to increased susceptibility of infection In addition however antimicrobial peptides and complement each influence the activity of inflammatory cells as recent data in the respective research areas shows This series of articles draws together for the entities of antimicrobial peptides and complement a balance of contributions in the areas of evolution roles functions and preclinical applications By comparing and contrasting antimicrobial peptides and complement greater cross disciplinary appreciation will be derived for their individual and overlapping spectra of activity circumstances of activation and their general ability to more completely inform the inflammatory and cellular response Pacific Rural Press ,1882 **Readers' Guide to Periodical Literature**

Intra- and inter-species interactions in microbial communities Luis Raul Comolli, Birgit Luef, Manfred Auer, 2015-03-03 Recent developments in various OMICs fields have revolutionized our understanding of the vast diversity and ubiquity of microbes in the biosphere However most of the current paradigms of microbial cell biology and our view of how microbes live and what they are capable of are derived from in vitro experiments on isolated strains Even the co culturing of mixed species to interrogate community behavior is relatively new But the majority of microorganisms lives in complex communities in natural environments under varying conditions and often cannot be cultivated Unless we obtain a detailed understanding of the near native 3D ultrastructure of individual community members the 3D spatial community organization their metabolic interdependences coordinated gene expression and the spatial organization of their macromolecular machines inventories as well as their communication strategies we won t be able to truly understand microbial community life How spatial and also temporal organization in cell cell interactions are achieved remains largely elusive For example a key question in microbial ecology is what mechanisms microbes employ to respond when faced with prey competitors or predators and changes in external factors Specifically to what degree do bacterial cells in biofilms act individually or with coordinated responses What are the spatial extent and coherence of coordinated responses In addition networks linking organisms across a dynamic range of physical constraints and connections should provide the basis for linked evolutionary changes under pressure from a changing environment Therefore we need to investigate microbial responses to altered or adverse environmental conditions

including phages predators and competitors and their macromolecular metabolic responses according to their spatial organization We envision a diverse set of tools including optical spectroscopical chemical and ultrastructural imaging techniques that will be utilized to address questions regarding e g intra and inter organism interactions linked to ultrastructure and correlated adaptive responses in gene expression physiological and metabolic states as a consequence of the alterations of their environment Clearly strategies for co evolution and in general the display of adaptive strategies of a microbial network as a response to the altered environment are of high interest While a special focus will be placed on terrestrial sole species or mixed biofilms we are also interested in aquatic systems biofilms in general and microbes living in symbiosis In this Research Topic we wish to summarize and review results investigating interactions and possibly networks between microbes of the same or different species their co occurrence as well as spatiotemporal patterns of distribution Our goal is to include a broad spectrum of experimental and theoretical contributions from research and review articles to hypothesis and theory aiming at understanding microbial interactions at a systems level , *Quarterly Journal of the Chemical Society of London* Chemical Society (Great Britain),1969
