The Of Clues:

The Seductions of Darwin Matthew Rampley, 2017-01-12 The surge of evolutionary and neurological analyses of art and its effects raises questions of how art culture and the biological sciences influence one another and what we gain in applying scientific methods to the interpretation of artwork In this insightful book Matthew Rampley addresses these questions by exploring key areas where Darwinism neuroscience and art history intersect Taking a scientific approach to understanding art has led to novel and provocative ideas about its origins the basis of aesthetic experience and the nature of research into art and the humanities Rampley's inquiry examines models of artistic development the theories and development of aesthetic response and ideas about brain processes underlying creative work He considers the validity of the arguments put forward by advocates of evolutionary and neuroscientific analysis as well as its value as a way of understanding art and culture With the goal of bridging the divide between science and culture Rampley advocates for wider recognition of the human motivations that drive inquiry of all types and he argues that our engagement with art can never be encapsulated in a single notion of scientific knowledge Engaging and compelling *The Seductions of Darwin* is a rewarding look at the identity and development of art history and its complicated ties to the world of scientific thought

Handbook of Creativity John A. Glover, Royce R. Ronning, Cecil R. Reynolds, 2013-03-09 The motivation underlying our development of a handbook of creativity was different from what usually is described by editors of other such volumes Our sense that a handbook was needed sprang not from a deluge of highly erudite studies calling out for organization nor did it stem from a belief that the field had become so fully articulated that such a book was necessary to provide summation and reference Instead this handbook was conceptualized as

an attempt to provide structure and organization for a field of study that from our perspective had come to be a large scale example of a degenerating research program see Brown Chapter 1 The handbook grew out of a series of discussions that spanned several years At the heart of most of our interactions was a profound unhappiness with the state of research on creativity Our consensus was that the number of good works published on creativity each year was small and growing smaller Further we could not point to a journal text or professional organization that was providing leadership for the field in shaping a scientifically sound framework for the development of research programs in creativity At the same time we were casting about for a means of honoring a dear friend E Paul Torrance Our decision was that we might best be able to honor Paul and influence research on creativity by developing a handbook designed to challenge traditional perspectives while offering research agendas based on contemporary psychological views
