Signs, Mind, and Reality Sebastian Shaumyan, 2006-01-01 The book presents a new science of semiotic linguistics The goal of semiotic linguistics is to discover what characterizes language as an intermediary between the mind and reality so that language creates the picture of reality we perceive The cornerstone of semiotic linguistics is the discovery and resolution of language antinomies contradictions between two apparently reasonable principles or laws Language antinomies constitute the essence of language and hence must be studied from both linguistic and philosophical points of view The basic language antinomy which underlies all other antinomies is the antinomy between meaning and information Both generative and classical linguistic theories are unaware of the need to distinguish between meaning and information By confounding these notions they are unable to discover language antinomies and confine their research to naturalistic description of superficial language phenomena rather than the quest for the essence of language

Origin of Group Identity Luis P. Villarreal,2008-12-10 A sense of belonging is basic to the human experience But in this humans are not unique Essentially all life from bacteria to humans have ways by which it determines which members belong and which do not This is a basic cooperative nature of life I call group membership which is examined in this book However cooperation of living things is not easily accounted for by current theory of evolutionary biology and yet even viruses display group membership That viruses have this feature would likely seem coincidental or irrelevant to most scientist as having any possible relationship to human group identity Surely such simple molecular based relationships between viruses are unrelated to the complex cognitive and emotional nature of human group membership Yet viruses clearly affect bacterial group membership which are the most diverse and abundant cellular life form on Earth and from which all life has evolved Viruses are the most ancient numerous and adaptable biological entities we know And we have long recognized them for the harm and disease they can cause and they have been responsible for the greatest numbers of human deaths However with the sequencing of entire genomes and more recently with the shotgun sequencings of habitats we have come to realize viruses are the black hole of biology a giant force that has until recently been largely unseen and historically ignored by evolutionary biology Viruses not only can cause acute disease but also persist as stable unseen agents in their host
