Hormones in Development and Aging Antonia Vernadakis, Paola S. Timiras, 1982 Aging Edward J. Masoro, 1995 How Not to Age Michael Greger, M.D., FACLM, 2023-12-05 Instant New York Times Bestseller Uncover the evidence based science to slowing the effects of aging from the New York Times bestselling author of the How Not to Die series When Dr Michael Greger founder of

NutritionFacts.org dove into the top peer-reviewed anti-aging medical research; he realized that diet could regulate every one of the most promising strategies for combating the effects of aging. We don't need Big Pharma to keep us feeling young; we already have the tools. In *How Not to Age*, the internationally renowned physician and nutritionist breaks down the science of aging and chronic illness and explains how to help avoid the diseases most commonly encountered in our journeys through life. Physicians have long treated aging as a malady, but getting older does not have to mean getting sicker. There are eleven pathways for aging in our bodies' cells, and we can disrupt each of them. Processes like autophagy, the upcycling of unusable junk, can be boosted with spermidine, a compound found in tempeh, mushrooms, and wheat germ. Senescent 'zombie' cells that spew inflammation and are linked to many age-related diseases may be cleared in part with quercetin-rich foods like onions, apples, and kale. And we can combat effects of aging without breaking the bank. Why spend a small fortune on vitamin C and nicotinamide facial serums when you can make your own for up to 2,000 times cheaper? Inspired by the dietary and lifestyle patterns of centenarians and residents of blue zone regions where people live the longest, Dr. Greger presents simple, accessible, and evidence-based methods to preserve the body functions that keep you feeling youthful, both physically and mentally. Brimming with expertise and actionable takeaways, *How Not to Age* lays out practical strategies for achieving ultimate longevity.

Review of Biological Research in Aging Morton Rothstein, 1985-08 **Biological Anthropology and Aging** Douglas E. Crews, Ralph M. Garruto, 1994. This timely volume explores evolutionary, cross-cultural, physiological, environmental, and pathological influences on variation in human biological aging. Chapters by leading experts use models traditionally unique to anthropological research in order to illuminate human biological aging as a heterogeneous and variable process. By explicitly emphasizing evolutionary biology and human variation, the book presents the fascinating perspective of human biological aging as the end result of a set of co-adapted genetic complexes associated with successful growth, development, reproduction, and parenting of offspring. While examining human life span and life history parameters as population-level phenomena, the book also emphasizes human phenotypic plasticity as key to understanding aging. This broad evolutionary perspective is unique in biological gerontology, a field that is often reductionist in method and theory. The book is sure to appeal to students, teachers, and researchers of geriatrics, gerontology, biology, and anthropology of aging and human population biology.
