Tests For Colour Blindness:

Ishihara Test Chart 24 Plate Edition Prof N L Shraman, 2019-10-09 The original Ishihara color blindness test was introduced in early last century and since then it is by far the most well known color vision deficiency test all around the world Dr Shinobu Ishihara from Japan produced three different test sets which are widely used and which are based on the same pseudoisochromatic plates This test is actually designed to be used in a booklet and is usually executed by an eye doctor But I have made an online version of the test available right here The online test is based on the 24 plates edition and will give you a little feedback at the end of the test As this test is only made to check for red green color blindness any other form of CVD can not be detected And at the end if you like you can even share your test result with your friends This way they can see how you performed and try the test themselves if they like to Be aware This test consists of scanned plates The colors are not exactly the same as in the original version You also have to consider that every computer screen has different color settings and therefore the test results might alter between different trials If you would like to see all the 24 plates in an overview you can find them at [Ishihara Test for Colour Deficiency 24 Plates Edition COLORBLINDNESS](#)

Detailed instructions included. What is colorblindness? Color blindness color vision deficiency is a condition in which certain colors cannot be distinguished and is most commonly due to an inherited condition. Red Green color blindness is by far the most common 99% form and causes problems in distinguishing reds and greens. Another color deficiency Blue Yellow also exists but is rare 1% and there is no commonly available test for it. There is no treatment for color blindness nor is it usually the cause of any significant disability. However it can be very frustrating for individuals affected by it. Those who are not color blind seem to have the misconception that color blindness means that a color blind person sees only in black and white or shades of gray. While this sort of condition is possible it is extremely rare. The Ishihara color test is a test for color blindness. It was named after its designer Dr Shinobu Ishihara 1879 1963 a professor at the University of Tokyo who first published his tests in 1917. It makes use of the peculiarity that in red green blindness blue and yellow appear remarkably bright compared to red and green. It consists of a number of colored plates on each plate is printed a circle made of many different sized dots of slightly different colors spread in a random manner. Within the dot pattern and differentiated only by color is a number. What or even if a number is visible indicates if and what form of color blindness the viewer has. The full test consists of thirty eight plates but the existence of a deficiency is usually clear after fewer plates. The Ishihara Color Charts are accepted by leading authorities worldwide as a simple and accurate test method. The color plates are available in an album type book for ease of handling.
