provides readers in healthcare practice and educational settings with an unparalleled depth of information on using informatics methods and tools. However this new text speaks to nurses and in a departure from earlier editions of this title to all health professionals in direct patient care regardless of their specialty extending its usefulness as a textbook. This includes physicians, therapists, pharmacists, dieticians and many others. In recognition of the evolving digital environments in all healthcare settings and of interprofessional teams the book is designed for a wide spectrum of healthcare professions including quality officers, health information managers, administrators and executives as well as health information technology professionals such as engineers and computer scientists in health care. The book is of special interest to those who bridge the technical and caring domain particularly nurse and medical informaticians and other informaticians working in the health sciences. *Nursing Informatics An Interprofessional and Global Perspective* contains real life case studies and other didactic features to illustrate the theories and principles discussed making it an ideal resource for use within health and nursing informatics curricula at both undergraduate and graduate level as well as for workforce development. It honors the format established by the previous editions by including a content array and questions to guide the reader. Readers are invited to look out of the box through a dedicated global perspective covering health informatics applications in different regions, countries and continents.

Borycki,J.A. Bartle-Clar,M.S. Househ,2011-02-09 Health information systems are now widely used around the world to raise the quality of healthcare, reduce medical error rates and improve access to health information and services and health informatics is now recognized as a separate and unique area of disciplinary study and professional practice. This book presents the proceedings of the 2011 Information Technology and Communications in Health ITCH conference in Victoria BC Canada in February 2011. Health Informatics issues are not unique to one country or one organization and with its theme of International Perspectives this conference provides a unique opportunity to share the lessons learned by both developed and developing countries. Effective use of scarce healthcare resources ensuring the long term sustainability of healthcare systems and moving the science of health informatics forward are discussed and the conference also addresses key issues at the intersection of technology and healthcare such as privacy, ethics, patient safety, efficiency and effectiveness which are common to healthcare providers worldwide. The improvement of healthcare systems which employ health informatics technology is dependent upon such international exchanges and solution sharing and this book will be of interest to all those involved in providing better healthcare worldwide.
