the new topic of cognitive neuroscience. However, available textbooks are written more for biology audiences than for psychology and related majors. This text aims to bridge that gap. A background in biology or neuroscience is not required. The thematic approach builds on widely understood concepts in psychology such as working memory, selective attention, and social cognition. Edited by two leading experts in the field, the book guides the reader along a clear path to understand the latest findings.

FEATURES

Written specifically for psychology, pre-medical education, and neuroscience undergraduate and graduate students. The thematic approach builds on accepted concepts, not presuming a background in neuroscience or biology. Includes two Appendices on brain imaging and neural networks, written by Thomas Ramsøy and Igor Aleksander. Introduces the brain in a step-by-step, readable style with gradually increasing sophistication. Richly illustrated in full color with clear and detailed drawings that build the brain from top to bottom, simplifying the layout of the brain for students. Pedagogy includes exercises and study questions at the end of each chapter.

Education and Health as Social Determinants: The Econeurobiology of Brain Development Raed Z. Mualem, Calixto Machado, Leon Morales-Quezada, Shir Shance, 2024-11-25

The econeurobiology of brain development describes the interaction of factors in a child's environment that determine brain plasticity, cognition, and learning by enhancing brain connectivity and through gene expression. These factors shape concentration, learning, inside and outside the classroom, social interaction, emotional development, and behaviour. Although brain development is maximal in the first three years of life, elementary school education is a significant determinant of adult health, employment, prosperity, and public health. The goal of this research topic is to examine how childhood education may be optimized for individual and public health and to look more closely at the unique interaction of education and health as determinants of social well-being and the health of societies. Emphasis on six factors that form the econeurobiology of brain development: a nurturing environment, sleep, nutrition, exercise, music, and teaching and learning strategies in school and the community that enhance brain connectivity among school-age children.
