Surface Processes And Landforms:

Surface Processes and Landforms Don J. Easterbrook, 1999 This book includes both basic material for students without a great deal of background in geology as well as more advanced topics. With coverage that reaches beyond the study of surface processes it contains discussions on the evolution of landforms and interpretation of their origin. The Second Edition reflects the increasing relevance of geomorphology to environmental concerns and the additional emphasis this has placed on more applied aspects of the field. Also considered is the revolution of the discipline brought on by many rapidly evolving tools such as computers sophisticated electronic measuring devices lasers mass spectrometers new methods of dating landforms and deposits and others

This book covers various geomorphological process domains and a wide range of terrestrial surface environments on Earth. It provides a broad spectrum of advanced techniques and methods of data collection and generation together with various approaches and methods of data analysis and geomorphologic modelling. This book is a valuable resource for upper level undergraduates, graduates and academics studying Earth surface processes as well as researchers and professionals in needing a comprehensive overview of Earth surface process change and influence during the Anthropocene. Comprehensively covers climatic and anthropogenic drivers of earth surface processes including detection and quantification techniques. Includes the latest research and suggestions for adapted and sustainable mitigation and management strategies. Includes worked examples and case studies of anthropogenic and climate influences on Earth surface processes
