Surfaces With Constant Mean Curvature:

Surfaces with Constant Mean Curvature Katsuei Kenmotsu, 2003 The mean curvature of a surface is an extrinsic parameter measuring how the surface is curved in the three dimensional space A surface whose mean curvature is zero at each point is a minimal surface and it is known that such surfaces are models for soap film There is a rich and well known theory of minimal surfaces A surface whose mean curvature is constant but nonzero is obtained when we try to minimize the area of a closed surface without changing the volume it encloses An easy example of a surface of constant mean curvature is the sphere A nontrivial example is provided by the constant curvature torus whose discovery in 1984 gave a powerful incentive for studying such surfaces Later many examples of constant mean curvature surfaces were discovered using various methods of analysis differential geometry and differential equations It is now becoming clear that there is a rich theory of surfaces of constant mean curvature In this book the author presents numerous examples of constant mean curvature surfaces and techniques for studying them Many finely rendered figures illustrate the results and allow the reader to visualize and better understand these beautiful objects Constant Mean Curvature Surfaces with Boundary Rafael López, 2013-08-31 The study of surfaces with constant mean curvature CMC is one of the main topics in classical differential geometry Moreover CMC surfaces are important mathematical models for the physics of interfaces in the absence of gravity where they separate two different media or for capillary phenomena Further as most techniques used in the theory of CMC surfaces not only involve geometric methods but also PDE and complex analysis the theory is also of great interest for many other mathematical fields While minimal surfaces and CMC surfaces in general have already been treated in the literature the present work is the first to present a comprehensive study of compact surfaces with boundaries narrowing its focus to a geometric view Basic issues include the discussion whether the symmetries of the curve inherit to the surface the possible values of the mean curvature area and volume stability the circular boundary case and the existence of the Plateau problem in the non parametric case The exposition provides an outlook on recent research but also a set of techniques that allows the results to be expanded to other ambient spaces Throughout the text numerous illustrations clarify the results and their proofs The book is intended for graduate students and researchers in the field of differential geometry and especially theory of surfaces including geometric analysis and geometric PDEs It guides readers up to the state of the art of the theory and introduces them to interesting open problems *Surfaces of Constant Mean Curvature in Space Forms* Bennett Palmer, 1986 **Surfaces of Constant Mean Curvature** Joseph Albert Wolf, 196? **Surfaces of Constant Mean Curvature in Constant Curvature Manifolds** D. between a surface and a symmetric manifold and constant mean curvature surfaces as completely integrable systems The presentation is accessible to undergraduate and graduate students in mathematics but will also be useful to researchers It is among the first textbooks about integrable systems their interplay with harmonic maps and the use of loop groups and it presents the theory for the first time from the point of view of a differential geometer The most important results are exposed with complete proofs except for the last two chapters which require a minimal knowledge from the reader Some proofs have been completely rewritten with the objective in particular to clarify the relation between finite mean curvature tori Wente tori and the loop group approach an aspect largely neglected in the literature The book helps the reader to access the ideas of the theory and to acquire a unified perspective of the subject Surfaces with Constant Mean Curvature Lawrence E.

On Parametric Surfaces with Constant Mean Curvature Along Given Smarandache Curves in Lie Group Zuhail Kucukarslan Yuzbasi,Sevinc Taze ,2022-01-01 This paper finds sufficient conditions to determine a surface whose mean curvature along a given Smarandache curve is constant in a three dimensional Lie group This is accomplished by using the Frenet frames of the specified curve to express surfaces that span the and Smarandache curves parametrically In terms of the curvatures of given Smarandache curves marching scale functions and their partial derivatives the mean curvatures of these surfaces along the given and Smarandache curves are determined Sufficient conditions are found to maintain the provided mean curvatures of the resulting surfaces at a constant value Finally some examples are provided **On Surfaces of Constant Mean Curvature in Hyperbolic Space** Jonas de M.
