**Tailored Polymeric Materials for Controlled Delivery Systems** Iain McCulloch, Shalaby W. Shalaby, 1998 The molecular engineering design and application of polymeric materials for use in delivery systems has evolved into one of the most promising advanced technology areas of polymer science as well as contemporary medical pharmaceutical and agricultural science This volume opens with two chapters providing a perspective on current topics in the field The remaining twenty two chapters discuss new and innovative research in the area They emphasize the role of molecular architecture and associated design and synthesis of new chain molecules and also cover assembling strategies for modulation of release profiles The authors provide concise accounts of key administration routes and clinical applications Topics include nanosphere micelles microspheres solid implants and injectable liquid gel formers     Polymeric Drug Delivery Sönke Svenson, 2006 Following an overview this volume describes in twenty chapters the use of carriers such as liposomes micelles dendrimers emulsion droplets nanoparticles and yeast cells in the targeted delivery of poorly water soluble drugs small organic molecules macromolecules such as proteins and nucleic acids and metal ions for molecular imaging purposes Different routes of application are described including oral and transepithelial delivery     *Chemical Aspects of Drug*

*Delivery Systems* D. R. Karsa, R. A. Stephenson, 1996 Despite advances in the development of new drugs a drug may never reach the target organ or it may be difficult to achieve the necessary level of drug in the body Large doses can result in serious side effects and can harm normal as well as diseased cells and organs and for this reason it is vital that controlled release and the targeting of delivery systems must evolve in parallel to drug research Chemical Aspects of Drug Delivery Systems reflects the modern challenge to devise effective drug delivery and targeting systems giving particular emphasis to recent innovations in the field Delivery systems described include carbohydrate derivatives novel nonionic surfactant vesicles and various polymers including polyacrylates and aqueous shellac solutions as well as hydrogels In addition many of the key issues such as the understanding of biosystems and targets and the development of materials to provide the deserved carrier and excipient properties for controlled targeted drug delivery are considered in depth This book will be of equal interest to undergraduate graduate researcher and those in the pharmaceutical industries and it complements two previous RSC Special Publications Encapsulation and Controlled Release and Excipients and Delivery Systems for Pharmaceutical Formulations
