Surgery On Compact Manifolds:

Surgery on Compact Manifolds Charles Terence Clegg Wall, Andrew Ranicki, 1999 The publication of this book in 1970 marked the culmination of a period in the history of the topology of manifolds. This edition based on the original text is supplemented by notes on subsequent developments and updated references and commentaries

Surgery on Compact Manifolds C. T. C. Wall, 2024-11-18 The publication of this book in 1970 marked the culmination of a particularly exciting

period in the history of the topology of manifolds. The world of high dimensional manifolds had been opened up to the classification methods of algebraic topology by Thom's work in 1952 on transversality and cobordism, the signature theorem of Hirzebruch in 1954 and by the discovery of exotic spheres by Milnor in 1956. In the 1960s there had been an explosive growth of interest in the surgery method of understanding the homotopy types of manifolds initially in the differentiable category including results such as the h-cobordism theory of Smale 1960, the classification of exotic spheres by Kervaire and Milnor 1962, Browder's converse to the Hirzebruch signature theorem for the existence of a manifold in a simply connected homotopy type 1962, the s-cobordism theorem of Barden, Mazur and Stallings 1964, Novikov's proof of the topological invariance of the rational Pontrjagin classes of differentiable manifolds 1965, the fibering theorems of Browder and Levine 1966 and Farrell 1967, Sullivan's exact sequence for the set of manifold structures within a simply connected homotopy type 1966, Casson and Sullivan's disproof of the Hauptvermutung for piecewise linear manifolds 1967, Wall's classification of homotopy tori 1969 and Kirby and Siebenmann's classification theory of topological manifolds 1970. The original edition of the book fulfilled five purposes by providing a coherent framework for relating the homotopy theory of manifolds to the algebraic theory of quadratic forms unifying many of the previous results, a surgery obstruction theory for manifolds with arbitrary fundamental group including the exact sequence for the set of manifold structures within a homotopy type and many computations, the extension of surgery theory from the differentiable and piecewise linear categories to the topological category, a survey of most of the activity in surgery up to 1970, a setting for the subsequent development and applications of the surgery classification of manifolds. This new edition of this classic book is supplemented by notes on subsequent developments. References have been updated and numerous commentaries have been added. The volume remains the single most important book on surgery theory.
