**Surgical Infections** Evangelos P. Misiakos, Konstantinos George Tsolis, 2018-05-23 Surgical infections are caused by the breakdown of the equilibrium existing between organisms and the host. This may occur after a breach in a protective surface as occurs after surgical trauma changes in host resistance or particular characteristics of the organism. The possible outcomes are abscess formation local spread with or without tissue death distant spread or resolution. A surgical infection is an infection requiring operative treatment excision or drainage and occupies an unvascularized space in tissue or may occur in an operated site. Common examples of the former group are furuncles and carbuncles hollow viscus inflammations such as appendicitis cholecystitis and most abscesses. The latter group comprises all surgical site infections. This Research Topic provides comprehensive information on the biology mechanisms prevention and treatment of surgery related infections.

contributions from both the developed and developing worlds Presents comprehensive research informed by the most recent technological and scientific advances in the field Infections in Surgery Massimo Sartelli, Raul Coimbra, Leonardo Pagani, Kemal Rasa, 2021-01-29 Although most clinicians are aware of the problem of antimicrobial resistance most also underestimate its significance in their own hospital The incorrect and inappropriate use of antibiotics and other antimicrobials as well as poor prevention and poor control of infections are contributing to the development of such resistance Appropriate use of antibiotics and compliance with infection prevention and control measures should be integral aspects of good clinical practice and standards of care However these activities are often inadequate among clinicians and there is a considerable gap between the best evidence and actual clinical practice In hospitals cultural determinants influence clinical practice and improving behaviour in terms of infection prevention and antibiotics prescribing practice remains a challenge Despite evidence supporting the effectiveness of best practices many clinicians fail to implement them and evidence based processes and practices that are known to optimize both the prevention and the treatment of infections tend to be underused Addressing precisely this problem this volume offers an essential toolkit for all surgeons and intensivists interested in improving their clinical practices **Surgical Infections** Manal Mohammad Baddour, 2020-02-05

Schein,John C. Marshall,2013-11-11 Source control is the key to the management of surgical infections Surgical decision making is based on the marriage of evidence from clinical studies inferences from biology and the elusive component of surgical experience this book combines these three elements We have recruited an international group of authors who are acknowledged leaders in the field of surgical infectious diseases We have challenged them to integrate evidence with experience and an understanding of biology so as to create overviews that will help the clinician who must make the difficult decisions And we have kept them honest by asking a second group of equally eminent commentators to provide supporting or alternative views in essence to recreate the kind of dialogue that takes place between clinicians discussing a difficult problem This is THE manual for the authoritative management of surgical infections *Manual on Control of Infection in Surgical Patients* American College of Surgeons.
