Surgical Risk:

The High-risk Surgical Patient Paolo Aseni, Antonino Massimiliano Grande, Ari Leppäniemi, Osvaldo Chiara, 2023-03-07 It is well known that certain diseases and patient conditions are associated with increased perioperative risk. The aim of this book is to define and identify the clinical factors that warrant a broader and more detailed assessment of pre operative surgical risk in difficult and unusual clinical settings. One of the sections is dedicated to the main pathway of peri and post surgical critical care based on the patient specific deterioration risk and associated diseases here a panel of selected experts describes the correct patient oriented pathways for complex or unscheduled surgical operations in order to reduce the operative risk. In addition the book describes the latest trends in minimally invasive surgical techniques that are associated with peri and post operative risk reduction and provides an overview of recent advances in surgical simulation focusing on perspectives in surgical research to increase patient safety. Guidance is also provided on extracorporeal membrane oxygenation ECMO Left Ventricular Assist Devices LVADs and their management in patients requiring emergency surgery. The book will help surgical trainees recognize cases with the highest surgical risk and identify the most common complications at an early stage.

Mastery of Vascular and Endovascular Surgery Gerald B. Zelenock, 2006 This new addition to the acclaimed *Mastery of Surgery* series guides readers step by step through all vascular surgical procedures both open and endovascular. In the tradition of the series this text atlas is written by the world's master surgeons and richly illustrated throughout with detailed drawings, photographs and imaging scans. Coverage of each procedure begins with indications, contraindications, preoperative preparation, anatomy and patient management followed by step by step descriptions of operative technique and pitfalls. For diseases in which open and endovascular approaches are used for different indications both approaches are presented with discussions of when and why each is preferable. Each chapter ends with an editor's comment.

Complications in Surgery Michael W. Mulholland, Gerard M. Doherty, 2006 This volume offers authoritative evidence based recommendations for preventing and managing complications in all current general surgery procedures. The opening sections discuss institutional risk management issues and risks common to all operations such as wound healing problems, infection, shock and complications in immunosuppressed patients. Subsequent sections focus on complications of specific procedures in thoracic, vascular, gastric, endocrine, breast and oncologic surgery as well as organ transplantation and pediatric surgery. For each procedure the authors discuss surgical goals, expected outcomes, preoperative identification of risk factors, intraoperative technique and postoperative risk. Numerous decision making algorithms, drawings of techniques and tables complement the text.
