## Supernova Story:

**The Supernova Story** Laurence A. Marschall,2021-02-09 Astronomers believe that a supernova is a massive explosion signaling the death of a star causing a cosmic recycling of the chemical elements and leaving behind a pulsar black hole or nothing at all In an engaging story of the life cycles of stars Laurence Marschall tells how early astronomers identified supernovae and how later scientists came to their current understanding piecing together observations and historical accounts to form a theory which was tested by intensive study of SN 1987A the brightest supernova since 1006 He has revised and updated The Supernova Story to include all the latest developments concerning SN 1987A which astronomers still watch for possible aftershocks as well as SN 1993J the spectacular new event in the cosmic laboratory

UNIVERSE describes the current state of astronomy both the fundamentals of astronomical knowledge that have been built up over decades and the exciting advances that are now taking place The writing style is friendly and carefully detailed It serves as a valuable reference for both beginners and astronomy enthusiasts This book is organized as a number of stories Individual chapters often tell what used to be known how space and other modern observations have transformed our understanding and then what is scheduled for the future This is done with each planet Consequently an instructor can easily add photos available as slides overheads CD ROMs and on the World Wide Web and movies and keep a student's interest for a whole lecture on each planet if desired Students learn about astronomy through concrete examples rather than merely being given overarching concepts without enough underpinning      **Braille Books** Library of Congress.
