Surface Acoustic Wave Devices and Their Signal Processing Applications Colin Campbell, 2012-12-02 Surface Acoustic Wave Devices and Their Signal Processing Applications is a textbook that combines experiment and theory in assessing the signal processing applications of surface acoustic wave SAW devices. The operating principles of SAW devices are described from a circuit design viewpoint. This book is comprised of 18 chapters and begins with a historical background on surface acoustic waves and a discussion on the merits of SAW devices as well as their applications. The next chapter introduces the reader to the basics of acoustic waves and piezoelectricity together with the effect of acoustic bulk waves on the performance of SAW filters. The principles of linear phase SAW filter design and equivalent circuit models for a SAW filter are then described. The remaining chapters focus on trade offs in linear phase SAW filter design, compensation for second order effects, harmonic SAW delay lines for gigahertz frequencies and coding techniques using linear SAW transducers. The final chapter highlights Some other significant alternative design techniques and applications for SAW devices. This monograph will be suitable for engineering or physics students as well as engineers scientists and technical staff in industry who seek further information on SAW based circuits systems and applications

**Systems and Applications** Clemens C. W. Ruppel, Tor A. Fjeldly, 2001 Surface acoustic wave SAW devices are recognized for their versatility and efficiency in controlling and processing electrical signals. This has resulted in a multitude of device concepts for a wide range of signal processing functions such as delay lines, filters, resonators, pulse compressors, convolvers, and many more. As SAW technology has found its way into mass market products such as TV receivers, pagers, keyless entry systems, and cellular phones, the production volume has risen to millions of devices produced every day. At the other end of the scale there are specialized high performance signal processing SAW devices for satellite communication and military applications such as radar and electronic warfare. This volume together with Volume 2 presents an overview of recent advances in SAW technology systems and applications by some of the foremost researchers in this exciting field

**Surface Acoustic Wave Filters** David Morgan, 2010-07-27 Surface Acoustic Wave Filters gives the fundamental principles and device design techniques for surface acoustic wave filters. It covers the devices in widespread use today: bandpass and pulse compression filters, correlators and non linear convolvers and resonators. The newest technologies for low bandpass filters are fully covered, such as unidirectional transducers, resonators in impedance element filters, resonators in double mode surface acoustic wave filters and transverse coupled resonators using waveguides. The book covers the theory of acoustic wave physics, the piezoelectric effect, electrostatics at a surface, effective permittivity, piezoelectric SAW excitation and reception.

and the SAW element factor These are the main requirements for developing quasi static theory which gives a basis for the non reflective transducers in transversal bandpass filters and interdigital pulse compression filters It is also needed for the reflective transducers used in the newer devices A thorough revision of a classic on surface acoustic wave filters first published in 1985 and still in print Uniquely combines easy to understand principles with practical design techniques for all the devices in widespread use today Complete coverage of all the latest devices which are key to mobile phones TVs and radar systems Includes a new foreword by Sir Eric Albert Ash

D. R. Arsenault,Laurence B. Milstein,P. Das,RENSSELAER POLYTECHNIC INST TROY NY MICROWAVE ACOUSTICS LAB.,1979 Three Surface Acoustic Wave SAW devices the separated medium convolver the memory correlator and the chirp filter are analyzed for signal processing applications Emphasis is placed on convolution correlation and Fourier transformation processes The chirp filter theory is more general and applied equally well to chirp filters fabricated by alternate techniques In the SAW convolver there is a piezoelectric delay line Two surface waves are introduced onto the delay line surface by interdigital transducers at its opposing ends The two waves overlap beneath a semiconductor spaced above the surface and their fields interact with its charge carriers A non linear potential is produced and averaged over the semiconductor From its back contact is obtained the time compressed convolution of the two signals The memory correlator is similar to the convolver except that the semiconductor possesses a charge storage mechanism Also additional transducers are required for recovery of stored information Author Scientific and Technical Aerospace Reports ,1978-10
