Surfaces Of A Diamond:

Functionalization of Semiconductor Surfaces Franklin Tao, Steven Bernasek, 2012-03-16 This book presents both fundamental knowledge and latest achievements of this rapidly growing field in the last decade. It presents a complete and concise picture of the state of the art in the field encompassing the most active international research groups in the world. Led by contributions from leading global research groups the book discusses the functionalization of semiconductor surface. Dry organic reactions in vacuum and wet organic chemistry in solution are two major categories of strategies for functionalization that will be described. The growth of multilayer molecular architectures on the formed organic monolayers will be documented. The immobilization of biomolecules such as DNA on organic layers chemically attached to semiconductor surfaces will be introduced. The patterning of complex structures of organic layers and metallic nanoclusters toward sensing techniques will be presented as well.

Diamond-Based Materials for Biomedical Applications Roger Narayan, 2013-03-19

Carbon is light weight, strong, conductive and able to mimic natural materials within the body, making it ideal for many uses within biomedicine. Consequently a great deal of research and funding is being put into this interesting material with a view to increasing the variety of medical applications for which it is suitable. Diamond based materials for biomedical applications presents readers with the fundamental principles and novel applications of this versatile material. Part one provides a clear introduction to diamond based materials for medical applications. Functionalization of diamond particles and surfaces is discussed, followed by biotribology and biological behaviour of nanocrystalline diamond coatings and blood compatibility of diamond like carbon coatings. Part two then goes on to review biomedical applications of diamond based materials, beginning with nanostructured diamond coatings for orthopaedic applications. Topics explored include ultrananocrystalline diamond for neural and ophthalmological applications, nanodiamonds for drug delivery systems and diamond nucleation and seeding techniques for tissue regeneration. Finally the book concludes with a discussion of diamond materials for microfluidic devices. With its distinguished editors and international team of expert contributors, Diamond based materials for biomedical applications is an authoritative guide for all materials scientists, researchers, medical practitioners and academics investigating the properties and uses of diamond based materials in the biomedical environment. Presents the fundamental principles and novel applications of this versatile material. Discusses the functionalization of diamond particles and surfaces, biotribology and biological behaviour of nanocrystalline diamond coatings and blood compatibility of diamond like carbon coatings. Reviews nanostructured diamond coatings for orthopaedic coatings.

Thin-Film

Diamond II Christopher Nebel, 2004-04-19 Part II reviews the state of the art of thin film diamond, a very promising new semiconductor that may one day rival silicon as the material of choice for electronics. Diamond has the following important characteristics: it is resistant to radiation damage, chemically inert and biocompatible, and it will become the material for bio-

electronics in vivo applications radiation detectors and high frequency devices Thin Film Diamond II is the first book to summarize state of the art of CVD diamond in depth It covers the most recent results regarding growth and structural properties doping and defect characterization hydrogen in and on diamond as well as surface properties in general applications of diamond in electrochemistry as detectors and in surface acoustic wave devices Accessible by both experts and non experts in the field of semi conductors research and technology each chapter is written in a tutorial format Assisting engineers to manufacture devices with optimized electronic properties Truly international this volume contains chapters written by recognized experts representing academic and industrial institutions from Europe Japan and the US Frontiers in Surface Science and Interface Science C.B.
