Muller, 2013-06-29 On March 28 and 29 1969 at the occasion of the dedication of the European Southern Observatory some 90 astronomers from all over the world gathered at the ESO headquarters at Santiago de Chile for discussing problems of the Magellanic Clouds They came from Argentina Australia Chile Mexico South Africa and the United States as well as from Europe these latter naturally mostly from the member states of ESO The choice of the subject was an obvious one When erecting the European Southern Observatory as a joint effort in European astronomy it was agreed from the beginning that the field of research should be the southern sky so far hardly explored with large telescopes Among the objects to be investigated the Magellanic Clouds rank highest together with the galactic centre region and the southern spiral structure Being located ten times closer than the nearest large stellar systems accessible to northern observers and containing a stellar population ranging in age from the oldest down to star formation the Clouds provide an ideal laboratory for research on to the stage current problems in astrophysics Yet most of the northern observational astronomers were hardly acquainted with the Magellanic Clouds naturally they are used to think in terms of research projects that can be conducted at their observatories A survey of the status of knowledge and research on the Clouds therefore appeared in order now that the first medium size telescopes of ESO came into operation **Hollis Frampton** Michael Zryd, 2022-05-10 The first collection of critical writing on the work of experimental filmmaker Hollis Frampton Hollis Frampton 1936 1984 was one

of the most important experimental filmmakers and theorists of his time and in his navigation of artistic media and discourses he anticipated the multimedia boundary blurring of today's visual culture. Indeed his photography continues to be exhibited and a digital edition of his films was issued by the Criterion Collection. This book offers the first collection of critical writings on Frampton's work. It complements *On the Camera Arts and Consecutive Matter* published in the MIT Press's Writing Art series which collected Frampton's own writings. October was as central to Frampton as he was to it. He was both a frequent contributor appearing in the first issue in 1976 and a frequent subject of contributions by others. Some of these important and incisive writings on Frampton's work are reprinted here. The essays collected in this volume consider Frampton's photographic practice which continued even after he turned to film, survey his film work from the 1960s to the late 1970s and explore Frampton's grounding in poetics and language. Two essays by the late Annette Michelson, one of the twentieth century's most influential writers on experimental film, place Frampton in relation to film and art history. Contributors: George Derk, Ken Eisenstein, Hollis Frampton, Peter Gidal, Barry Goldensohn, Brian Henderson, Bruce Jenkins, Annette Michelson, Christopher Phillips, Melissa Ragona, Allen S. Weiss, Federico Windhausen, Lisa Zaher, Michael Zryd. **Computational Collective Intelligence. Technologies and Applications** Jeng-Shyang Pan, Shyi-Ming Chen, Ngoc-Thanh
