**Problems of Representation in the Teaching and Learning of Mathematics** Université du Québec à Montréal. Centre interdisciplinaire de recherche sur l'apprentissage et le développement en éducation, 1987 As the title suggests this book presents more questions than answers Although it was prepared for those involved in research in the field of mathematics education we also had in mind our colleagues who assume responsibility for the training of teachers It is aimed at providing those concerned with basic research orientations a fund of fundamental theoretical perspectives research methodologies analyses and research results Introduction **Teaching and Learning Secondary School Mathematics** Ann Kajander, Jennifer Holm, Egan J Chernoff, 2018-10-24 This volume brings together recent research and commentary in secondary school mathematics from a breadth of contemporary Canadian and International researchers and educators It is

both representative of mathematics education generally as well as unique to the particular geography and culture of Canada. The chapters address topics of broad applicability such as technology in learning mathematics recent interest in social justice contexts in the learning of mathematics as well as Indigenous education. The voices of classroom practitioners the group ultimately responsible for implementing this new vision of mathematics teaching and learning are not forgotten. Each section includes a chapter written by a classroom teacher making this volume unique in its approach. We have much to learn from one another and this volume takes the stance that the development of a united vision supported by both research and professional dialog provides the first step. Effective Learning and Teaching in Mathematics and Its Applications Peter Kahn, Joseph Kyle, 2003-12-16. An exploration of the key issues in the teaching of mathematics a key subject in its own right and one that forms an important part of many other disciplines. Talking Mathematics in School Magdalene Lampert, Merrie L. Blunk, 1998-10-13. The teaching and learning of mathematics in K 12 classrooms is changing. New curricula and methods engage learners in working on real problems. An essential feature of this work involves teacher and students in talking mathematics. How can students learn to do this kind of talking? What can they learn from doing it? This book addresses these questions by looking at the processes of formulating problems interpreting contexts in which problems arise and arguing about the reasonableness of proposed solutions. The studies in this volume seek to retain the complexity of classroom practice rather than looking at it through a particular academic lens. Strengths-Based Teaching and Learning in Mathematics Beth McCord Kobett, Karen S. Karp, 2020-02-27. This book is a game changer. Strengths Based Teaching and Learning in Mathematics 5 Teaching Turnarounds for Grades K 6 goes beyond simply providing information by sharing a pathway for changing practice. Focusing on our students strengths should be routine and can be lost in the day to day teaching demands. A teacher using these approaches can change the trajectory of students lives forever. All teachers need this resource. Connie S Schrock Emporia State University National Council of Supervisors of Mathematics President 2017 2019

NEW COVID RESOURCES ADDED A Parent s Toolkit to Strengths Based Learning in Math is now available on the book s companion website to support families engaged in math learning at home. This toolkit provides a variety of home based activities and games for families to engage in together. Your game plan for unlocking mathematics by focusing on students strengths. We often evaluate student thinking and their work from a deficit point of view particularly in mathematics where many teachers have been taught that their role is to diagnose and eradicate students misconceptions. But what if instead of focusing on what students don t know or haven t mastered we identify their mathematical strengths and build next instructional steps on students points of power. Beth McCord Kobett and Karen S Karp answer this question and others by highlighting five key teaching turnarounds for improving students mathematics learning identify teaching strengths discover and leverage students strengths design instruction from a strengths based perspective help students identify their points of power and promote strengths in the school community and at home. Each chapter provides opportunities to stop and consider
