The Complete Torre Attack First Edition:

Petrosian: Move by Move, 1st Edition Thomas Engqvist, 2014-08-19 Tigran Petrosian was a World Chess Champion and a true legend of the game. He was nicknamed Iron Tigran because of his incredible defensive skills that made him a formidable opponent who was virtually impossible to defeat. Petrosian was the master of restraint, prophylaxis and prevention. He could spot and defuse threats well before they were created, suck the life out of an opponent's position and then seize a vice-like grip on the game. In this book International Master Thomas Engqvist selects and examines his favourite Petrosian games and shows us how we can all learn and improve our chess by studying Petrosian's masterpieces. Move by Move provides an ideal platform to study chess. By continually challenging the reader to answer probing questions throughout the book, the Move by Move format greatly encourages the learning and practising of vital skills just as much as the traditional assimilation of knowledge. Carefully selected questions and answers are designed to keep you actively involved and allow you to monitor your progress as you learn. This is an excellent way to improve your chess skills and knowledge. Learn from the games of a World Champion. Important ideas absorbed by continued practice. Utilizes an ideal approach to chess study.

Looking for Trouble Dan Heisma, 2023-10-05 Identify and Deal with Threats. This book is written to address and underemphasized area of chess training and study: the identification of and reaction to threats. For beginning and intermediate level players the study of tactics is paramount. Almost all tactics books take the approach of providing a position where there is a forced win, checkmate or draw. However, *Looking for Trouble* now in a revised and enlarged third edition takes a different tack. It helps you to recognize threats by providing over 300 problems in which you focus on identifying and meeting threats in the opening, middlegame and endgame. The author's clear explanations are presented in a manner that should greatly benefit players of all levels.

Computational Models of Argument Chris Reed, Matthias Thimm, Tjitzé Rienstra, 2024-09-15 This book presents the proceedings of COMMA 2024, the 10th biennial International Conference on Computational Models of Argument, held from 18 to 20 September 2024 in Hagen, Germany. The COMMA conference series provides a dedicated forum for the presentation and discussion of the latest advancements in this interdisciplinary field, covering basic research systems and innovative applications and nurturing the steady growth of interest in computational argumentation research worldwide. A total of 63 submissions was received for the conference and, after a thorough review process, 26 were accepted as full papers, with a further 12 accepted as demos accompanied by an extended abstract and 2 as full papers with accompanying demo, resulting in an acceptance rate of 53% for full papers and 63% for papers and demo abstracts combined. In addition to these 40 papers, extended abstracts of the 3 invited talks are also included here. Semantics in Argumentation Classifications and Challenges by Leila Amgoud, Expanding the Scope of Bayesian Argumentation by Ulrike Hahn, and The Long Road to Trustworthy Natural Language Argumentation by Serena Villata. The book provides a fascinating overview of current research and innovations and will be of interest to all those working in the field.
