of a comprehensive research and development program for taro should be viewed in light of a recent National Academy of Science study that points to two important facts One is that the United States must join the hungry nations to develop an agriculture that can feed the world or face food problems at home This is because food production in the United States is faltering yields are no longer increasing and increased energy inputs are starting to show diminishing returns Another point made by the study is that over the next twenty five years the new breadbaskets will be the developing countries They are the ones with the greatest capacity to increase food production A corollary to this is that neglected crops like taro have a potential that has not yet been fulfilled *Mineral Nutrient Disorders of Root Crops in the Pacific* E.
