ICT applications such as ecommerce supply chain systems and enterprise resource systems were least used The size of supermarkets also determined ICT equipment that were used Coefficient of correlation of 0.52 was obtained from the regression analysis that measured the strength of the relationship between dependent and independent variables The relationship was direct meaning that supermarkets with largest extent of ICT application in their premises had the highest operational efficiency It was recommended that supermarket owners acquaint themselves with ICT applications that are available in the market and evaluate those that are suitable for their needs Supermarkets that had a wide array of application in their premises had high operational efficiency It is therefore necessary that they use all available ICT applications depending on their needs Given that some ICT applications were expensive to buy and implement it was suggested that developers make applications that are suitable for local needs with regard to supermarkets *Biographic Register of the Department of State* United States.
