### **The Continuum Concept:**

*The Continuum Concept* Jean Liedloff, 1986-01-22 A landmark treatise on how humanity lives versus how we should what we've lost with our progress and how we can reclaim our true nature Jean Liedloff an American writer spent two and a half years in the South American jungle living with Stone Age Indians The experience demolished her Western preconceptions of how we should live and led her to a radically different view of what human nature really is She offers a new understanding of how we have lost much of our natural well being and shows us practical ways to regain it for our children and for ourselves

**The Continuum Concept** Jean Liedloff, 1990-01-01      **The Continuum Concept** Jean Liedloff, 1995      **Dual-process Theories in Social Psychology** Shelly Chaiken, Yaacov Trope, 1999-02-19 This informative volume presents the first comprehensive review of research and theory on dual process models of social information processing These models distinguish between qualitatively different modes of information processing in making decisions and solving problems e.g. associative versus rule based controlled versus uncontrolled and affective versus cognitive modes Leading contributors review the basic assumptions of these approaches and review the ways they have been applied and tested in such areas as attitudes stereotyping person perception memory and judgment Also examined are the relationships between different sets of processing modes the factors that determine their utilization and how they work in combination to affect responses to social information

**Ranges of Applicability for the Continuum-beam Model in the Constitutive Analysis of Carbon Nanotubes: Nanotubes Or Nano-beams?**, 2001 Ranges of validity for the continuum beam model the length scale effects and continuum assumptions are analyzed in the framework of scaling analysis of NT structure Two coupled criteria for the applicability of the continuum model are presented Scaling analysis of NT buckling and geometric parameters e.g. diameter and length is carried out to determine the key non dimensional parameters that control the buckling strains and modes of NT buckling A model applicability map which represents two classes of NTs is constructed in the space of non dimensional parameters In an analogy with continuum mechanics a mechanical law of geometric similitude is presented for two classes of beam like NTs having different geometries Expressions for the critical buckling loads and strains are tailored for the distinct groups of NTs and compared with the data provided by the molecular dynamics simulations Implications for molecular dynamics simulations and the NT based scanning probes are discussed

**Applicability of the Continuum-Shell Theories to the Mechanics of Carbon Nanotubes** Vasyl Michael Harik, 2002 Validity of the assumptions relating the applicability of continuum shell theories to the global mechanical behavior of carbon nanotubes is examined The present study focuses on providing a basis that can be used to qualitatively assess the appropriateness of continuum shell models for nanotubes To address the effect of nanotube structure on their deformation all nanotube geometries are divided into four major classes that require distinct models Criteria for the applicability of continuum models are presented The key parameters that control the buckling strains and deformation modes of these classes of nanotubes are determined In an

analogy with continuum mechanics mechanical laws of geometric similitude are presented A parametric map is constructed for a variety of nanotube geometries as a guide for the applicability of different models The continuum assumptions made in representing a nanotube as a homogeneous thin shell are analyzed to identify possible limitations of applying shell theories and using their bifurcation buckling equations at the nano scale
