Technology In Hospitals:

Technology in Hospitals Louise B. Russell, 1979 Abstract New technologies do contribute to rising hospital costs. However, the primary component of rising expenditures is the result of increased insurance benefits and third party payers. Case studies and statistical methods are combined to present new technologies of the past 25 years in the context of the flow of resources into medical care. Technologies considered include intensive care, respiratory therapy, diagnostic radioisotopes, the electroencephalograph, open heart surgery, cobalt therapy, and renal dialysis. Dilemmas posed by new medical technologies in the United States, Sweden, Great Britain, and France are examined. The best answer to slowing rising costs will be a mixture of policies on rationing resources. The two possibilities for constraint are 1) an aggregate limit on total resources as through a national budget for medical care and 2) coinsurance for medical care in which the patient pays some fraction of the cost, usually depending on income.

Smart Hospitals Vishnu Pala, 2020-12 In today's world, the necessity is growing out. The Covid 19 has turned the innovation in hospitals into a need of time. But the basic question is: are we really up to the mark to modernize and digitalize the hospitals through available technology, manpower to build required infrastructure? Are we ready to accept this challenge? Do we have the required knowledge to transform our basic health care resources? From the name of the book *Smart Hospital*, you can guess the hidden treasure you are going to discover in this book at the right time, irrespective of your role within the health sector. The book *Smart Hospitals: Technology, Talents, and Transformation* by V M Pala is going to be one of the best possible and practical steps towards modernizing our healthcare system, especially the hospitals, to fulfill the standards of future minimum requirements, including Patient-centricity. This book is based on three T's, which are a baseline for this book. The author has emphasized these three T's: Technology, Talents, and Transformation; these are the three basic MUST HAVES which the author thinks is going to be a front line for creating and running a full-fledged hospital. Describing the concept of Smart Hospitals and thinking about the new era of Digital, modern nursing techniques, modern technologies in surgeries and operating patients, also using modern techniques in managing the healing, as well as the data generated from the patients on a daily basis. But the author's thoughts are not only limited to it. He has also mentioned in his book about the upgrading of the health care management system, which is a strong need of time, keeping in view of the current efficiency of the health care systems and standards around the world after the wave of COVID 19. The author has also shared the Advanced concepts of introducing block chain Technology in the Smart Hospitals, which are going to revolutionize the era of medical terms and system transparency. Though these are some of the things which the author has deeply discussed in his book, you would find much more innovative thoughts in this timely publication. This book is going to be a game changer. I would recommend all the involved Staff, including hospital leaders, technologists, and a common man, to have a basic understanding to read the book and to spread the thoughts for our health benefits.

Health Technology Assessment Laura Sampietro-Colom, Janet Martin, 2017-01-23 A timely work describing how localized hospital based health technology assessment HB HTA complements general arms length HTA agency efforts and what has been the collective global impact of HB HTA across the globe While HB HTA has gained significant momentum over the past few years expertise in the field and information on the operation and organization of HB HTA has been scattered This book serves to bring this information together to inform those who are currently working in the field of HTA at the hospital regional national or global level In addition this book is intended for decision makers and policy makers with a stake in determining the uptake and decommissioning of new and established technologies in the hospital setting HTA has traditionally been performed at the National Regional level by HTA Agencies typically linked to governments Yet hospitals are the main entry door for most health technologies HTs Hospital decision makers must undertake multiple high stakes investment and disinvestment decisions annually for innovative HTs usually without adequate information Despite the existence of arms length HTA Agencies inadequate information is available to hospital decision makers either because relevant HTA reports are not yet released at the time of entry of new technologies to the field or because even when the report exists the information contained is insufficient to clarify the contextualized informational needs of hospital decision makers Therefore there has recently been a rising trend toward hospital based HTA units and programs These units programs complement the work of National Regional HTA Agencies by providing the key and relevant evidence needed by

hospital decision makers in their specific hospital context and within required decision making timelines The emergence of HB HTA is creating a comprehensive HTA ecosystem across health care levels which creates better bridges for knowledge translation through relevance and timeliness
