## **Technology Transfer In International Business:**

*Technology Transfer in International Business* Tamir Agmon, Mary Ann Von Glinow, 1991-08-01 This important collection examines the means by which technological knowledge is transferred from countries that develop it to those who need it. Written by well known authorities and derived from a conference held at the University of California and sponsored by IBEAR International Business Education Research Program the contributions focus on the transfer of technology from Western countries to Asian countries.

Managing International Technology Transfer Min Chen, 1996 As a result of the rapid globalization of business the subject of international technology transfer is now of importance to both scholars and practitioners of international business. In drawing his examination from the fields of international studies, international management and international law Min Chen provides a comprehensive consideration of the management and legal implications of international technology transfer. The text is divided into four organically linked parts which discuss comparative national policies on technology transfer, the international protection of intellectual property, international licensing and lastly international technology transfer via other major commercial channels. This work should be of interest to students and academics in business and technology, also to international executives and lawyers.

**International Business and Technological Innovation** Daniel D. Roman, Joseph F. Puett, 1983

Organizing Global Technology Flows Pierre-Yves Donzé, Shigehiro Nishimura, 2013-11-12 Research on the international transfer of technology in economics and management literature has primarily focused on the role of countries and that of companies in particular multinational enterprises (MNEs). Similarly economic and business historians have tended to view international technology transfer as a way for economically backward countries to acquire new technologies in order to catch up with more developed economies. This volume provides a more in depth understanding of how the international transfer of technologies is organized and in particular challenges the core periphery model that is still dominant in the extant literature. By looking beyond national systems of innovation and statistics on foreign trade, patent registration and foreign direct investment the book sheds more light on the variety of actors involved in the transfer process including engineers, entrepreneurs, governments, public bodies, firms etc. and on how they make use of a broad set of national and international institutions facilitating technology transfer. Put differently the volume offers a better understanding of the complexity of global technology flows by examining the role and actions of the different actors involved. By bringing together a number of original case studies covering many different countries over the period from the late 19th to the 21st century the book demonstrates how technology is being transferred through complex processes involving a variety of actors from several countries using the national and international institutional frameworks.

International Technology Transfer by Small and Medium-Sized Enterprises Peter J. Buckley, Jaime Campos, Eduardo White, 2014-01-14 The book is the culmination of a research effort which spanned all continents and involved a large number of research teams from both the industrialised and developing countries. The book addresses a number of key issues related

to technology transfer by small and medium sized enterprises most especially whether such companies are more effective transferors than larger transnational corporations A key aspect of the research was the fact that firms in source and host countries were matched to assure a degree of consistency in the firm coverage and their responses **Technology**

Sagafi-nejad,Robert Belfield,2014-06-28 Transnational Corporations Technology Transfer and Development A Bibliographic Sourcebook compiles references one can use in studying transnational corporations and related topics The compilation divides various source materials into eight major themes The sourcebook presents publications on the development of science and technology the International Technology Gap and the NIEO and transnational corporations and technology The other groups of publications compiled mainly focus on the anatomy of corporate technology transfer technology transfer and host countries and sectoral analysis wherein several case studies are included The last two sets of reference materials are concerned with technology transfer and the home country and its regulation This sourcebook will be invaluable to those in need of lists of reference materials on transnational corporations

#### **The Role of International Business in Clean**

**Technology Transfer and Development** Ans Kolk,2013 While research has generated useful very insights usually at the macro level regarding the multi faceted nature of environmental innovation and regulation the characteristics and drivers peculiar to international companies have remained underexposed in the policy related literature on clean technology transfer and development This article aims to help open the black box of business also as input for future policy making by discussing aspects that influence corporate responses sector specific and company specific peculiarities as well as those related to country contexts both origin countries and host countries to companies Most of the climate related investments in developing countries turn out to have been geared to a few emerging economies generally involving established technologies with limited transfer and a major role for developed country utilities particularly from Europe Despite these limitations there is a base with experience being built up and a potential for extension to lesser developed areas but that requires market co creation by joint business and governmental efforts As viable business models are largely lacking the article suggests three main modalities ranging from fully commercial to primarily publicly funded involving different types of actors and countries Gearing policies more toward corporate realities and reaping the international momentum of sustainable energy might also further climate goals

Phillips, 2018-10-26 This book first published in 1989 compares contrasts and evaluates the nature scale and direction of industry academic interactions in Britain and Japan the conversion of academic discoveries into practical products Japan shows its outstanding ability to translate scientific ideas into high technology products Within this wider investigation detailed consideration is given to the manner in which these interactions promote innovation and technology transfer The information in this study provides a perspective against which decisions can be made about industry education interaction arrangements and much of this information is largely unavailable outside Japan

**Strategic Planning in Technology Transfer to Less Developed Countries** Christian Madu, 1992-01-27 Despite an avalanche of literature over the last 30 years there has been relatively little written on the role played by strategic planning in the transfer of technology particularly from developed to less developed countries Technology transfer which involves the acquisition of inventive activity by secondary users is conceded vital to socio economic growth but usually it is looked at internationally from a micro perspective Unlike other books Madu's volume looks at technology transfer holistically It examines the advantages of technology transfer and its limitations by viewing recipient nations as systems in which social economic behavioral and political influences converge to help shape technological decisions Only when a systems perspective like this is adopted and technology seen as a strategic variable can technology transfer be understood and successfully implemented says Madu Madu thus identifies the failures of technology transfer as the result of malfunctions in three components of the system technology structure and behavior He analyzes these malfunctions offers ways to repair them and considers technology from the viewpoints of both transferrer and receiver whose missions goals and objectives are often not only disparate but sometimes in conflict He then offers what he calls prescriptive frameworks and guidelines to help implement transfer and to see it as a variable that must be integrated into national development planning Throughout Madu makes it clear that the objective of technology transfer is the maximizing of social welfare Using this overarching premise he is able to evaluate both the benefits and the social costs associated with technology transfer and to develop his prescriptive integrative models Intended for specialists in international finance and development and international business management Madu's book will be of special value to teachers of graduate courses in socio economic development public policy and

economics and to policymakers throughout government
