## Telecommunications For Management:

**The Essentials of Telecommunications Management** Jayraj Ugarkar,2010-03      **Foundations of Business**

**Telecommunications Management** Kenneth C. Grover,2012-12-06 Information technology is about more than computers. Thus it was a recurring and rather infuriating aspect of the early discussions on information technology that those who participated tended either to ignore or to severely underestimate the role of information technology in telecommunications. This very fine book by Ken Grover goes a long way toward correcting that misconception. However important the computer and computer-based equipment might be, the role of telecommunications equipment has also been and continues to be significant. Moreover, as the author brings out, it is going to be even more important. As this enthralling story unfolds, the reader will find him or herself continually remarking that there cannot be more but again and again there is. Those who are already of the world of telecommunications will, on reading this work, be proud of their colleague. Those who are already of the world of computers will learn a great deal and it is to be hoped will, in future, be fairer toward telecommunications than they have been in the past. Those who are new to the world of information technology will sally forth better balanced than most.

*Telecom Operations Management Solutions with NetExpert* Kornel Terplan,1998-06-09 The communications environment is rapidly changing. The barriers of traditional phone and data technologies are going to break down and users can expect a true multimedia environment with existing services transferred and new services implemented. New suppliers such as cable companies will compete with interexchange carriers RBOCs and local phone companies for the market share. The differentiator is the price performance ratio of the service under consideration. Today's migrated and new services lack powerful management solutions. *Telecom Operations Management Solutions with NetExpert* examines the most advanced products available to manage new technologies as well as addresses services such as Advanced telephony, Wireless networks, Commercial broadband, Mass market broadband, Competitive access services, Intercarrier communications, Infrastructure services. This resource also demonstrates how expert systems solve the problem of handling the large volume of data streams from numerous network components. Practical solutions support each example of an application offering first hand operational experience. The book provides practical examples to deploy management solutions based on NetExpert framework from Objective Systems Integrator. The framework consists of the principal modules such as a gateway to managed devices and services as well as the workstation for operators. This framework is extended by point rulesets to manage individual devices by domain rulesets to manage device groups by enterprise rulesets to manage complete telco services. The solution sets support all layers of telecommunication management networks such as element network service and business layers. As a result, these solution sets are extremely important to both incumbent and new telco service providers. Numerous cases cover customized solutions for managing wireless networks, sonet rings, ATM, old and new phone services, broadband services and special access services of ISPs. *Telecom Operations Management Solutions with NetExpert*

describes never before published information about solution sets based on an expert system based framework

### **Telecommunications**

**Management** Richard Gershon, Richard A. Gershon, 2001 With today's communications industry experiencing major changes on an almost daily basis media managers must have a clear understanding of the different delivery platforms as well as a grasp of critical management planning and economic factors in order to stay current and move their organizations forward. Telecommunications Management helps current and future media professionals understand the relationship and convergence patterns between the broadcast cable television telephony and Internet communication industries. Author Richard A. Gershon examines telecommunications industry structures and the management practices and business strategies affecting the delivery of information and entertainment services to consumers. He brings in specialists to present the finer points of management and planning responsibilities. Case studies from the International Radio and Television Society (IRTS) competition supplement the main text and offer an invaluable perspective on management issues. Developed for students in telecommunications management, electronic media management and telecommunication economics this volume also serves as a practical reference for the professional manager.

### **The Management of Telecommunications** Houston H.

Carr, Charles A. Snyder, 2003 Rather than solely concentrating on the technology of telecommunications Carr and Snyder's The Management of Telecommunications Business Solutions to Business Problems 2/e caters more to the needs of today's business students. Management Of Telecommunications is the ideal textbook for exposing students to all facets of being a telecommunications end user. It stresses the importance of the managerial decision making side of telecommunications by applying the use of an integrated continuing case to illustrate key concepts and show the decision process. This book will provide business students with the technical vocabulary, technical understanding and decision making ability necessary to be an effective business telecommunications manager. Students using Carr and Snyder's book will lead the decision making process by having an understanding of technology tradeoffs in relation to costs, marketing, customer service and competition. Students will learn how telecommunications and telecommunications intensive information systems in particular are part of the strategic, tactical and operational decision processes of an organization.
