**Digital Communications with Emphasis on Data Modems** Richard W. Middlestead, 2017-03-07 This book uses a practical approach in the application of theoretical concepts to digital communications in the design of software defined radio modems. This book discusses the design implementation and performance verification of waveforms and algorithms appropriate for digital data modulation and demodulation in modern communication systems. Using a building block approach the author provides an introductory to the advanced understanding of acquisition and data detection using source and executable simulation code to validate the communication system performance with respect to theory and design specifications. The author focuses on theoretical analysis algorithm design firmware and software designs and subsystem and system testing. This book treats system designs with a variety of channel characteristics from very low to optical frequencies. This book offers system analysis and subsystem implementation options for acquisition and data detection appropriate to the channel conditions and system specifications and provides test methods for demonstrating system performance. This book also outlines fundamental system requirements and related analysis that must be established prior to a detailed subsystem design. Includes many examples that highlight various analytical solutions and case studies that characterize various system performance measures. Discusses various aspects of atmospheric propagation using the spherical 4/3 effective earth radius model. Examines Ionospheric propagation and uses the Rayleigh fading channel to evaluate link performance using several robust waveform modulations. Contains end of chapter problems allowing the reader to further engage with the text. *Digital Communications with Emphasis on Data Modems* is a great resource for communication system and digital signal processing engineers and students looking for in depth theory as well as practical implementations.

**Free Space Optical Communication** A. Arockia Bazil Raj, 2015-12-18 Recent progress in ICT has exceeded our expectations for meeting the requirement of multimedia society in the 21st century. The FSOC is considered to be one of the key technologies for realizing very high speed multi GbPs large capacity terrestrial and aerospace communications. In FSOC the optical beam propagation in the turbulent atmosphere is severely affected by various factors suspended in the channel. Wavefront aberration correcting with continuous beam alignment are the key requirements for a successful installation of an FSOC system which are the main contributions in our book. Establishment of FSOC setups development of accurate weather station measurement of atmospheric attenuation Att and turbulence strength Cn2 development of new models to predict the Att and Cn2 design of Response Surface Model and Artificial Neural Network based on controller implementation of neural controller in FPGA and attaining the BER of  $6.4 \times 10^{-9}$  during different outdoor environments. All the original contributions newness findings and experimental results etc are reported in the book. Subject of work Wireless Optical Communication.
