Wareing, 1976 **Current Topics in Developmental Biology** Gerald Schatten, 2001-08 Current Topics in Developmental Biology provides a comprehensive survey of the major topics in the field of developmental biology. The volumes are valuable to researchers in animal and plant development as well as to students and professionals who want an introduction to cellular and molecular mechanisms of development. The series has recently passed its 30 year mark making it the longest running forum for contemporary issues in developmental biology. **Essential Developmental Biology** Leonardo Reeves, 2021-11-16 Developmental biology refers to the process of growth and development of plants and animals. It encompasses the biology and mechanisms of metamorphosis, asexual reproduction, stem cell growth and differentiation, and regeneration. Tissue patterning, tissue growth, and tissue morphogenesis are the chief processes related to the embryonic development of animals. Although plant development shares many similarities with animal development, plant morphogenesis is achieved via differential growth due to immobility of plant cells. Research in developmental biology emphasizes the use of model organisms. This book elucidates the concepts and innovative models around prospective developments with respect to developmental biology. It presents researches and studies performed by experts across the globe. This book is a resource guide for experts as well as students. *The Development Biology of Plants and Animals*, 1976 *The Development Biology of Plants and Animals*, 1976 **Research Grants Index** National Institutes of Health (U.S.). It encompasses various areas of study such as biology of regeneration, metamorphosis, asexual reproduction, as well as the growth of stem cells in the adult organisms. The developmental processes of organisms are divided into two major categories, namely cell differentiation and regeneration. The process in which different functional cell types arise during development is known as cell differentiation. The ability to regrow a missing part is known as regeneration. Some of the other processes studied within this field are regional specification, morphogenesis, and growth. This book unfolds the innovative aspects of developmental biology, which will be crucial for the progress of this field in the future. The topics included herein on this subject are of utmost significance and bound to provide incredible insights to readers. Coherent flow of topics, student-friendly language, and extensive use of examples make this book an invaluable source of knowledge. **The Soviet Journal of Developmental**
