Marsili-Libelli, 2018-09-03 Explore the inner workings of environmental processes using a mathematical approach
Environmental Systems Analysis with MATLAB combines environmental science concepts and system theory with numerical
techniques to provide a better understanding of how our environment works The book focuses on building mathematical
models of environmental systems and using these models to analyze their behaviors Designed with the environmental
professional in mind it offers a practical introduction to developing the skills required for managing environmental modeling
and data handling The book follows a logical sequence from the basic steps of model building and data analysis to
implementing these concepts into working computer codes and then on to assessing their results It describes data processing
rarely considered in environmental analysis outlines the tools needed to successfully analyze data and develop models and
moves on to real world problems The author illustrates in the first four chapters the methodological aspects of environmental
systems analysis and in subsequent chapters applies them to specific environmental concerns The accompanying software
bundle is freely downloadable from the book web site It follows the chapters sequence and provides a hands on experience
allowing the reader to reproduce the figures in the text and experiment by varying the problem setting A basic MATLAB
literacy is required to get the most out of the software Ideal for coursework and self study this offering Deals with the basic
concepts of environmental modeling and identification both from the mechanistic and the data driven viewpoint Provides a
unifying methodological approach to deal with specific aspects of environmental modeling population dynamics flow systems
and environmental microbiology Assesses the similarities and the differences of microbial processes in natural and man made
environments Analyzes several aquatic ecosystems case studies Presents an application of an extended Streeter Phelps S P
model Describes an ecological method to estimate the bioavailable nutrients in natural waters Considers a lagoon ecosystem
from several viewpoints including modeling and management and more *Regional Environmental Systems Analysis* , 1972
