**Innovation and Entrepreneurship in Technology-Based Firms** Michael J. C. Martin, 1994-09-28 Describes principles and methodologies necessary to build efficient and highly productive work systems in high tech organizations that must develop and deploy new products in a timely fashion with competitive advantage Presents techniques applicable to small high tech consumer products or large complex systems requiring cost control waste minimization and rapid product development Stresses methodologies to be used for strategic advantage Suggests diverse strategic plans and their pros and cons depending on the product and markets

*Renewable Resources a Systematic Approach* Enrique Campos-López, 2013-09-24 Renewable Resources A Systematic Approach focuses on the use of renewable resources presenting a multifaceted perspective on its complex process This book analyzes the social and physical impacts of renewable resource exploitation through different approaches The importance of photosynthesis in the production of biomass is also presented as well as the processes of substitution technology and the possibilities of systemizing the flow of energy and materials This publication likewise covers the management of renewable resources from humid tropics and semiarid zones and components of non renewability which unavoidably will be more and more linked to the exploitation of renewable resources This compilation is valuable to biologists who search for new techniques for the massive propagation of plants as well as chemists who intend to acquire knowledge of chemical alternatives for the conversion of many sources of raw materials and energy to cellulose

*Technology Strategies* Thomas Durand, 2025-02-17 Technological evolution represents a potential threat for incumbent businesses while offering opportunities for potential new entrants to surf the wave of change to break in Technology Strategies Turning technological change into competitive advantage addresses the challenge of reaping the benefits of technological innovation providing firms with sound concepts frameworks tools and methods to develop technology strategies proactively to carve a viable path for their future The book recaps fifty years of research findings reported in academic literature sieving through the many bits and pieces of what has been learnt and reorganizing them into an integrated framework The book also contains a part dedicated to the practical implications of the overall framework presented The book delves into technological change and its strategic consequences revisits technological substitutions beyond the classic though potentially misleading S curve representation and suggests buying insurance against technological uncertainty using the concept of organizational competence and capabilities underlying technologies Technology Strategies is an excellent resource to help top tier management craft an overarching technology strategy for the future success of their organization

Dynamics of Data Envelopment Analysis Jati Sengupta, 2013-11-11 Data envelopment analysis develops a set of nonparametric and semiparametric techniques for measuring economic efficiency among firms and nonprofit organizations. Over the past decade this technique has found most widespread applications in public sector organizations. However these applications have been mostly static. This monograph extends this static framework of efficiency analysis in several new directions. These include but are not limited to the following: 1 a dynamic view of the production and cost frontier where capital inputs are treated differently from the current inputs; 2 a direct role of the technological progress and regress which is so often stressed in total factor productivity discussion in modern growth theory in economics; 3 stochastic efficiency in a dynamic setting where reliability improvement competes with technical efficiency; 4 flexible manufacturing systems where flexibility of the production process and the economies of scope play an important role in efficiency analysis; and 5 the role of economic factors such as externalities and input interdependences. Efficiency is viewed here in the framework of a general systems theory model. Such a view is intended to broaden the scope of applications of this promising new technique of data envelopment analysis. The monograph stresses the various applied aspects of the dynamic theory so that it can be empirically implemented in different situations. As far as possible abstract mathematical treatments are avoided and emphasis placed on the statistical examples and empirical illustrations.

*Forecasting Methods for Management* Steven C. Wheelwright, Spyros G. Makridakis, 1985 The fourth edition of this classic source provides an overview of a broad range of forecasting techniques and an understanding of their strengths and weaknesses. No background in quantitative methods is required. The new edition includes greater emphasis on the track record of forecasting, a refined approach to the quantitative methods, new material on monitoring computer based systems and empirical evidence of forecasting usage, and a complete update on technological and judgmental methods.

*Forecasting for Technologists and Engineers* Brian C. Twiss, 1992 This book is written for all technologists and engineers. To those unfamiliar with forecasting it may appear a somewhat esoteric activity with little relevance to the everyday technical concerns of the reader. This is not so. The aim of this book is to show how forecasting can improve the quality of technical decision making. Furthermore this can be accomplished without the use of highly sophisticated techniques which can only be applied by specialists. The approaches described in this book can be easily understood and used by all its readers.
