*Technology in America ,1980      The Machine in America* Professor Carroll Pursell,Carroll W. Pursell,1995 From the medieval farm implements brought by the first colonists to the invisible links of the Internet the history of technology in America is a history of our society as well Arguing that the tools and processes we use are a part of our lives not simply instruments of our purpose historian Carroll Pursell analyzes technology s impact upon the lives of women and men their work politics and social relationships and in turn their influence upon technological development Pursell shows how both the idea of progress and the mechanical means to harness the forces of nature developed and changed as they were brought from the Old World to the New He describes the ways in which American industrial and agricultural technology began to take on a distinctive shape as it adapted and extended the technical base of the industrial revolution He discusses the innovation of an American System of Manufactures and the mechanization of agriculture new systems of mining lumbering

and farming which helped conquer and define the West and the technologies that shaped the rise of cities And he shows how the export of technology helped to foster American hegemony both in the Western Hemisphere and elsewhere in the world Pursell also argues that American technology has created a social hegemony not only over the way we live but also over how we evaluate that life He shows that such developments as scientific management techniques and industrial research changed Americans lives as much as the mass production of such durable consumer goods as radios and automobiles In many ways he concludes today s military industrial complex is the legacy of the intense cooperation between science and technology during World War II Stephen King's America Jonathan P. Davis, 1994 Follows themes relating to life in America as they thread through the many works of popular horror writer King Among them are personal morality childhood innocence and adult corruption technology capitalism autonomy and conformity and survival Includes four interviews with experts on King s writing Paper edition unseen 14 95 Annotation copyright by Book News Inc Portland OR History of American Technology John W. Oliver, 2013-09 *America as Second Creation* David E. Nye, 2004-09-17 An exploration of the dialogue that emerged after 1776 between different visions of what it meant to use new technologies to transform the land After 1776 the former American colonies began to reimagine themselves as a unified self created community Technologies had an important role in the resulting national narratives and a few technologies assumed particular prominence Among these were the axe the mill the canal the railroad and the irrigation dam In this book David Nye explores the stories that clustered around these technologies In doing so he rediscovers an American story of origins with America conceived as a second creation built in harmony with God s first creation While mainstream Americans constructed technological foundation stories to explain their place in the New World however marginalized groups told other stories of destruction and loss Native Americans protested the loss of their forests fishermen resisted the construction of dams and early environmentalists feared the exhaustion of resources A water mill could be viewed as the kernel of a new community or as a new way to exploit labor If passengers comprehended railways as part of a larger narrative about American expansion and progress many farmers attacked railroad land grants To explore these contradictions Nye devotes alternating chapters to narratives of second creation and to narratives of those who rejected it Nye draws on popular literature speeches advertisements paintings and many other media to create a history of American foundation stories He shows how these stories were revised periodically as social and economic conditions changed without ever erasing the earlier stories entirely The image of the isolated frontier family carving a homestead out of the wilderness with an axe persists to this day alongside later images and narratives In the book s conclusion Nye considers the relation between these earlier stories and such later American developments as the conservation movement narratives of environmental recovery and the idealization of wilderness **Technically Speaking** National Research Council, National Academy of Engineering, Committee on Technological Literacy, 2002-04-13 Cell phones airbags genetically modified food the Internet These are all emblems of modern life You might ask what we would do without

them. But an even more interesting question might be what would we do if we had to actually explain how they worked. The United States is riding a whirlwind of technological change. To be sure there have been periods such as the late 1800s when new inventions appeared in society at a comparable rate. But the pace of change today and its social, economic and other impacts are as significant and far reaching as at any other time in history. And it seems that the faster we embrace new technologies the less we're able to understand them. What is the long term effect of this galloping technological revolution? In today's new world it is nothing less than a matter of responsible citizenship to grasp the nature and implications of technology. *Technically Speaking* provides a blueprint for bringing us all up to speed on the role of technology in our society including understanding such distinctions as technology versus science and technological literacy versus technical competence. It clearly and decisively explains what it means to be a technologically literate citizen. The book goes on to explore the context of technological literacy the social, historical, political and educational environments. This readable overview highlights specific issues of concern the state of technological studies in K-12 schools the reach of the Internet into our homes and lives and the crucial role of technology in today's economy and workforce. Three case studies of current issues car airbags, genetically modified foods and the California energy crisis illustrate why ordinary citizens need to understand technology to make responsible decisions. This fascinating book from the National Academy of Engineering is enjoyable to read and filled with contemporary examples. It will be important to anyone interested in understanding how the world around them works.

**Twelve Inventions which Changed America** Gerhard Falk, 2013 This book describes twelve inventions that transformed the United States from a rural and small town community to an industrial country of unprecedented power. These inventions demonstrate that no one person is ever responsible for technological advances and that the culture produces a number of people who work together to create each new invention. The book also shows the influences of technology on society and examines the beliefs and attitudes of those who partake in technological advances. The book is both a sociological analysis and a history of technology in the United States in the past two hundred years.

*Eschatology and the Technological Future* Michael S. Burdett, 2014-12-05 The rapid advancement of technology has led to an explosion of speculative theories about what the future of humankind may look like These technological futurisms have arisen from significant advances in the fields of nanotechnology biotechnology and information technology and are drawing growing scrutiny from the philosophical and theological communities This text seeks to contextualize the growing literature on the cultural philosophical and religious implications of technological growth by considering technological futurisms such as transhumanism in the context of the long historical tradition of technological dreaming Michael Burdett traces the latent religious sources of our contemporary technological imagination by looking at visionary approaches to technology and the future in seminal technological utopias and science fiction and draws on past theological responses to the technological future with Pierre Teilhard de Chardin and Jacques Ellul Burdett's argument arrives at a contemporary Christian response to transhumanism based around the themes of possibility and promise by turning to the works of Richard Kearney Eberhard Jüngel and Jürgen Moltmann Throughout the author highlights points of correspondence and divergence between technological futurisms and the Judeo Christian understanding of the future

*United States Code United States, 2007* *Technology in Postwar America* Carroll Pursell, 2007-06-29 Carroll Pursell tells the story of the evolution of American technology since World War II His fascinating and surprising history links pop culture icons with landmarks in technological innovation and shows how postwar politics left their mark on everything from television automobiles and genetically engineered crops to contraceptives Tupperware and the Veg-O-Matic Just as America's domestic and international policies became inextricably linked during the Cold War so did the nation's public and private technologies The spread of the suburbs fed into demands for an interstate highway system which itself became implicated in urban renewal projects Fear of slipping into a postwar economic depression was offset by the creation of a consumers

republic in which buying and using consumer goods became the ultimate act of citizenship and a symbol of an American Way of Life Pursell begins with the events of World War II and the increasing belief that technological progress and the science that supported it held the key to a stronger richer and happier America He looks at the effect of returning American servicemen and servicewomen and the Marshall Plan which sought to integrate Western Europe into America s economic business and technological structure He considers the accumulating problems associated with American technological supremacy which by the end of the 1960s led to a crisis of confidence Pursell concludes with an analysis of how consumer technologies create a cultural understanding that makes political technologies acceptable and even seem inevitable while those same political technologies provide both form and content for the technologies found at home and at work By understanding this history Pursell hopes to advance a better understanding of the postwar American self

**Future Imperfect** Howard P. Segal,1994 In a series of case studies Howard P Segal reconsiders the American ideology of technological progress and its legacy for our contemporary high tech world He offers concrete examples drawn from United States history literature and museums of the role of technology in American life and the complex relationship between technological advances and social developments In each instance he finds technology neither wholly good nor wholly bad but rather a mixed blessing

**Red Spies in America** Katherine Amelia Siobhan Sibley,2004 The most detailed study of Soviet military industrial espionage during the 1930s 1940s and 1950s spying aimed specifically at acquiring restricted information and materials relating to American industry technology and science
