## **Teichmüller Theory In Riemannian Geometry:**

**Teichmüller Theory in Riemannian Geometry** Anthony Tromba, 2012-12-06 These lecture notes are based on the joint work of the author and Arthur Fischer on Teichmüller theory undertaken in the years 1980-1986. Since then many of our colleagues have encouraged us to publish our approach to the subject in a concise format easily accessible to a broad mathematical audience. However it was the invitation by the faculty of the ETH Zürich to deliver the ETH Nachdiplom Vorlesungen on this material which provided the opportunity for the author to develop our research papers into a format suitable for mathematicians with a modest background in differential geometry. We also hoped it would provide the basis for a graduate course stressing the application of fundamental ideas in geometry. For this opportunity the author wishes to thank Eduard Zehnder and Jürgen Moser acting director and director of the Forschungsinstitut für Mathematik at the ETH, Gisbert Wiethölz responsible for the Nachdiplom Vorlesungen and the entire ETH faculty for their support and warm hospitality. This new approach to Teichmüller theory presented here was undertaken for two reasons. First it was clear that the classical approach using the theory of extremal quasi-conformal mappings in this approach we completely avoid the use of quasi-conformal maps was not easily applicable to the theory of minimal surfaces a field of interest of the author over many years. Second many other active mathematicians who at various times needed some Teichmüller theory have found the classical approach inaccessible to them.

*Handbook of Teichmüller Theory* Athanase Papadopoulos, 2007 This multi-volume set deals with Teichmüller theory in the broadest sense namely as the study of moduli space of geometric structures on surfaces with methods inspired or adapted from those of classical Teichmüller theory. The aim is to give a complete panorama of this generalized Teichmüller theory and of its applications in various fields of mathematics. The volumes consist of chapters each of which is dedicated to a specific topic. The volume has 19 chapters and is divided into four parts: The metric and the analytic theory, uniformization, Weil-Petersson geometry, holomorphic families of Riemann surfaces, infinite dimensional Teichmüller spaces, cohomology of moduli space and the intersection theory of moduli space, The group theory, quasi-homomorphisms of mapping class groups, measurable rigidity of mapping class groups, applications to Lefschetz fibrations, affine groups of flat surfaces, braid groups and Artin groups, Representation spaces and geometric structures, trace coordinates, invariant theory, complex projective structures, circle packings and moduli spaces of Lorentz manifolds homeomorphic to the product of a surface with the real line, The Grothendieck Teichmüller theory, dessins d'enfants, Grothendieck's reconstruction principle and the Teichmüller theory of the solenoid. This handbook is an essential reference for graduate students and researchers interested in Teichmüller theory and its ramifications in particular for mathematicians working in topology, geometry, algebraic geometry, dynamical systems and complex analysis. The authors are leading experts in the field.
