Synthetic Biomedical Polymers Concepts And Applications:

Synthetic Biomedical Polymers Michael Szycher, William Joseph Robinson, 1980 *Natural and Synthetic Biomedical Polymers* Sangamesh G. Kumar, Cato Laurencin, Meng Deng, 2014-01-21 Polymers are important and attractive biomaterials for researchers and clinical applications due to the ease of tailoring their chemical physical and biological properties for target devices. Due to this versatility they are rapidly replacing other classes of biomaterials such as ceramics or metals. As a result the demand for biomedical polymers has grown exponentially and supports a diverse and highly monetized research community. Currently worth 1.2bn in 2009 up from 650m in 2000 biomedical polymers are expected to achieve a CAGR of 9.8% until 2015 supporting a current research community of approximately 28 000. Summarizing the main advances in biopolymer development of the last decades this work systematically covers both the physical science and biomedical engineering of the multidisciplinary field. Coverage extends across synthesis characterization design consideration and biomedical applications. The work supports scientists researching the formulation of novel polymers with desirable physical chemical biological biomechanical and degradation properties for specific targeted biomedical applications. Combines chemistry biology and engineering for expert and appropriate integration of design and engineering of polymeric biomaterials. Physical chemical biological biomechanical and degradation properties alongside currently deployed clinical applications of specific biomaterials aids use as single source reference on field 15 case studies provides in depth analysis of currently used polymeric biomaterials aiding design considerations for the future
