Ure'evich Maslov, 1987 In a fluent, clear and lively style, this translation by two of Maslov's junior colleagues brings the work of the late Soviet scientist S. Yu. Maslov to a wider audience. Maslov was considered by his peers to be a man of genius who was making fundamental contributions in the fields of automatic theorem proving and computational logic. He published little and those few papers were regarded as notoriously difficult. This book, however, was written for a broad audience of readers and describes elegant examples of applications in such fields as computer science, artificial intelligence, operations research, economic modeling and biological modeling, among others. The book also brings to light the work by the American mathematician E. L. Post, which inspired Maslov's own work in the development of a general theory and which has been long neglected by mathematical logicians and systems theorists in the United States. The book's first chapter introduces the Rules of the Game. Part I: Mathematics of Calculi covers E. L. Post's canonical systems, deductive systems and algorithms and probabilistic calculi and deductive information. Part II: Horizontal Modeling takes up a toy economy, the calculi of technological possibilities and the development of rules. Part III: Vertical Modeling deals with the topics of to fight and to search and the consequences of the asymmetry of cognitive mechanisms.
