Steroid Hormone Action:

Steroid and Sterol Hormone Action Thomas C. Spelsberg, Rajiv Kumar, 2012-12-06 The purpose of this book is to focus attention on recent developments in steroid and sterol hormone action. Many authors have generously contributed to the book. As a result, there is a great diversity of opinion. A majority of the chapters deal with steroid or sterol hormone receptors. This is not meant to imply that receptor-mediated mechanisms are the sole or even the most important mechanisms by which steroid hormones act in the cell. There is wealth of evidence showing that other non-receptor events are important also. Steroid hormone receptor research and the study of nuclear events mediated by steroids are presently the most intensely studied aspects of sterol hormone action, and our selection of topics reflects this trend. We have also included chapters on vitamin D sterols and thyroid hormone in the book, as there is good evidence that these hormones act in a manner similar to other classical steroids.

INTRODUCTION It is well known that steroid hormones, certain vitamins, and sterols enter target cells and bind to specific protein receptors in the cytoplasm or nucleus.

1.4 This binding is saturable, high affinity, and steroid specific.

Steroid Hormone Action and Cancer K. Menon, 2012-12-06 This volume is an outgrowth of a symposium held at the University of Michigan, Ann Arbor, Michigan, October 27-29, 1975. This symposium was organized to bring together basic scientists and clinicians for the purpose of exchanging new ideas and the latest information in the area of Steroid Hormone Action and Cancer. The design of the symposium included both formal plenary sessions and informal roundtable discussion groups; the chapters of this volume being drawn primarily from these proceedings. During the last quarter of a century, considerable progress has been made toward understanding the molecular mechanisms involved in steroid hormone action. It now appears that the mechanism of action of the four major classes of steroid hormones is qualitatively similar. Research during the past decade has demonstrated steroid hormone receptors in a variety of normal and neoplastic tissues. Receptor-containing neoplasms have been shown to be hormone dependent and undergo regression when treated with hormone antagonists. Natural and synthetic steroids also have been employed for many years to successfully treat various types of cancer: for example, estrogens and androgens for breast cancer; estrogens and progestagens for prostatic carcinoma; progestagens for endometrial carcinoma; and corticoids for leukemias. All of these neoplasms have now been found to possess receptors for the steroids empirically used in their treatment.

Steroid Hormone Action Gordon Ringold, 1988-09-15 Steroid hormones and growth factors are important in the regulation of normal and neoplastic cell function. This volume surveys what we know of steroid receptor structure and function from basic

molecular biology of steroid hormone action to clinical implications of steroid metabolism Topics covered include steroid receptors and their genes steroid production receptor activation and the physiological effects of steroid action from alterations in glycoprotein processing to control of cell differentiation **Steroid Hormone Action** Malcolm G.

Parker,1993 This volume provides a detailed overview of the mechanisms by which steroid hormones regulate gene activity in target cells It should be of interest to molecular biologists endocrinologists pharmacologists and clinicians interested in gene regulation hormones and steroid antagonists Recent Advances in Steroid Hormone Action V.
